SALE TERMS & CONDITIONS

Terms of the sale are cash unless prior arrangements have been made. When making settlement, please leave specific instructions in writing regarding transfer and delivery. Each animal will be sold to the highest bidder. The auctioneer will settle any disputes regarding bids, and decisions on such matters will be final. Each animal becomes the purchaser's risk as soon as it is sold and will be turned over to the purchaser as soon as practicable after settlement. All announcements made from the auction block on sale day will take precedence over statements printed in this catalog.

GUARANTEE

All cattle are guaranteed to be breeders. Should an adjustment become necessary, it will be made with either a replacement animal of equal value or credit toward the purchase of another animal.

RETAINED FLUSH RIGHT

We retain the right to one flush on every female selling in the auction.

GENETIC ABNORMALITIES

DNA testing has been utilized throughout our breeding program to identify known genetic abnormalities. Any animal identified as a carrier or affected by a recognized genetic condition will be designated in the catalog or announced from the auction block. Animals not identified as carriers are believed to be free of known testable genetic abnormalities based on available DNA results and pedigree information. No warranty is made regarding genetic conditions not currently recognized or testable by the breed associations. Buyers are encouraged to review available DNA information before bidding.

BREEDING INFORMATION

Current breeding and expected calving dates are provided throughout the catalog. Any updates will be announced sale day.

DELIVERY & ANIMAL CARE

We will precondition and wean heifers prior to shipment. Buyers are responsible for shipping expenses. We will gladly assist in coordinating shipping whenever possible to combine loads. Cattle will be cared for following the sale for a reasonable period while delivery or pickup arrangements are made. Buyers must insure their purchases while they remain in our care.

SHOW PROGRAM

Buyers have the option of leaving females with us to be exhibited at the national shows. The cost of exhibiting a heifer at Reno is \$1,500. The cost of exhibiting a heifer at Oklahoma City, Denver, or Fort Worth is \$1,800 per show. These fees include entries, show preparation, and related show expenses. An additional \$8 per day feed charge will apply while the heifer remains at the ranch beginning November 1, 2026. The buyer will take possession following the respective show and will be responsible for arranging transportation. Any banners, ribbons, or hardware earned will belong to the buyer.

HALF INTEREST TERMS

The buyer will own a one-half interest in the female. If the female is shown, show expenses will be shared equally (50/50). Colyer Herefords & Angus will retain possession of the female during her show career, maintain and breed her, and cover all maintenance costs following her show career. When embryos are produced, one-half will be transferred to the buyer. The buyer will pay their portion of flush expenses when embryos are shipped. Alternatively, we and the buyer may alternate flushes, with the goal of providing an equal number of embryos to each party. If the buyer prefers to flush the female at their own facility, and we agree, they may take possession of the female. In that event, we will receive one-half of the embryos produced or may alternate flushes with the buyer.

LIABILITY

Everyone attending this sale does so at their own risk. Neither the owners nor their employees assume any legal liability for accidents that may occur.

ABSENTEE BIDDING

If you are unable to attend the sale but wish to participate, absentee and phone bids are welcome. Phone bids are handled with satisfaction guaranteed. We understand the demands of busy schedules and the expense of travel. Please contact Guy, Kyle, or any of the sale representatives listed to place a bid.

Real time online bidding will be available with LIVEAUCTIONS.TV

25th ANNUAL FALL FEMALE SALE

WELCOME C T H E D I F F E R E N C E

After 25 years, it's fascinating to look back on how our fall female sales have developed. We started with the very first internet sale, featuring just a few open Hereford heifer calves. Each subsequent year, we expanded by adding more lots, including bred heifers. A recent visitor remarked, "This female sale truly has something for everyone." We wholeheartedly agree!

We feel we have the largest set of show heifer prospects ever offered. There are also heifer calves that will make awesome cows. The bred heifers are always a highlight of the sale, as every heifer that conceives on first service with a heifer pregnancy sells. We had a 78% first-service conception rate on the Hereford heifers, which means a larger group was offered this year. The cow-calf splits always seem to be where the bargains are. Be sure to study the possibilities here.

The Angus section of the sale continues to expand in both quality and quantity, featuring several top show prospects. Donor prospects and elite cow lines are well represented throughout the offering.

We have had an exciting summer here at the ranch. It started with an expansion of the sale barn. We were honored to be selected as the Seedstock Producer of the Year by the Beef Improvement Federation and hosted a tour stop during those meetings. The real highlight was hosting the NJHA Faces of Leadership. Having 100-plus young Hereford enthusiasts at the ranch was very rewarding.

We invite you to the ranch to inspect the offering. Please note that the pictures and videos were taken in the heat of July. They really come on as the weather cools in early fall. We offer free delivery to central points throughout the US.

Guy & Sherry Kyle, Piper & Cruz Katie & Tige

RANCHING IN BRUNEAU, IDAHO SINCE

1876

CELEBRATING 150 YEARS

Guy & Cathy Colyer riding Pidgeon at the Shoo-Fly Camp in 1953.

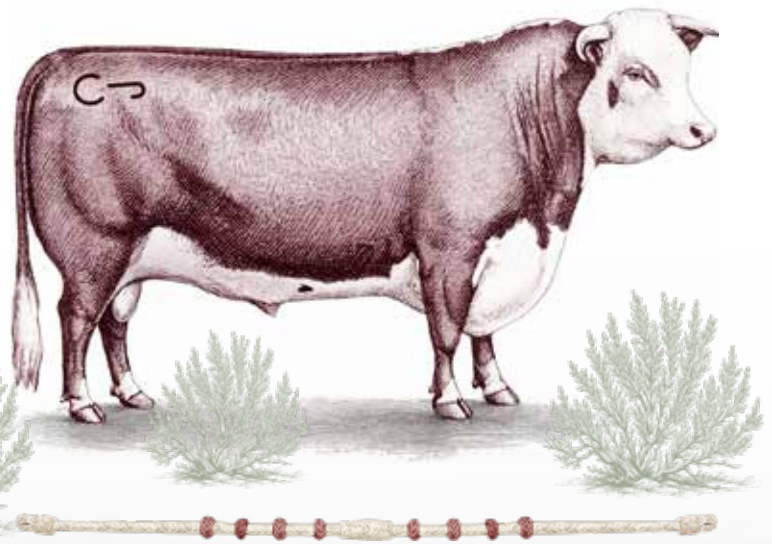

THE HISTORY BEHIND THE 74 BRAND

On July 13, 1949, a year before Guy was born, Raymond L. Colyer of Bruneau, Guy's father, registered the 74 brand with the State of Idaho. Recorded for cattle and horses on the right hip, the 74 became a signature of the Colyer family and its Angus herd. Renewed through the years, the mark remains a direct link to the family's early years in the cattle business.

THE HISTORY BEHIND THE C-7 BRAND

On February 12, 1968, Walter Colyer, Guy's uncle and Raymond L. Colyer's brother, registered the C Lazy J brand with the State of Idaho while residing in Bruneau, Idaho, Owyhee County. The original registration designated the brand for cattle on the right hip and horses on the right shoulder. In 1969, the brand transferred to Walter's sister, Lola Blossom, before being transferred to her nephew, J. Guy Colyer, in 1979.

DATA, DEDICATION AND DIVERSITY:

THE COLYER APPROACH TO MODERN BEEF IMPROVEMENT

From integrating computers in 1984 to achieving Platinum TPR status, 2026 BIF Seedstock Producer of the Year Colyer Hereford & Angus has spent decades proving data integrity is the most valuable product a seedstock producer can offer.

BY ANGIE STUMP DENTON

*Originally published by Drovers Magazine
June 2026*

On a ranch where the first cattle grazed in 1876, the Colyer family has spent nearly 150 years proving tradition and innovation are not opposites — they are partners. The rugged landscape of Bruneau, Idaho, is home to what began as a commercial cow-calf operation that evolved into one of the nation's most respected seedstock programs.

A pivotal transition came in 1992, when the commercial herd and a portion of the ranch's private land and BLM grazing rights were sold to Simplot Land and Livestock — a strategic decision that allowed the family to sharpen their focus on seedstock production and expand into registered Angus cattle to meet the evolving needs of their commercial customers. The dual-breed program that emerged from that decision has since become one of the operation's defining competitive advantages.

Today, the ranch is a true family affair, managed by Guy and Sherry alongside their son, Kyle, daughter, Katie, and grandchildren Cruz and Piper.

For their excellence in disciplined genetics, comprehensive data collection and an unwavering commitment to the commercial cattleman, the Colyer family was recognized as the 2026 Seedstock Producer of the Year during the 2026 Beef Improvement Federation Symposium June 3 in Boise, Idaho.

While the Colyers are leaders in the showing, their primary focus remains the commercial cattleman.

"For nearly 150 years, the Colyer family has made a lasting impact on commercial cow herds across the U.S. by supplying Hereford and Angus genetics rooted in disciplined selection, comprehensive data collection and a focused breeding program," says Shane Bedwell, American Hereford Association (AHA) chief operating officer. *"Their longevity, combined with a forward-thinking approach to genetic improvement, is something that should be admired across the beef industry."*

The Colyers maintain approximately 200 registered Hereford and 200 registered Angus females, along with roughly 300 recipient cows used in their embryo transfer program.

THE PLATINUM STANDARD OF DATA

For the Colyers, "good enough" is never the benchmark. They're pioneers in technology adoption, having integrated their first computer system in 1984.

L to R: Angie Stump Denton, Guy, Katie & Cruz Colyer; & Gordon Hodges, 25-26 BIF President.

Today, the ranch is one of only 23 Hereford breeders in the U.S. to achieve Platinum TPR (Total Performance Records) status. This designation reflects a relentless commitment to data integrity, requiring complete reporting on every calf crop, from birth weights and calving ease to genomics and ultrasound data.

When the American Angus Association launched its own whole-herd reporting program in 2012, the Colyers enrolled immediately, ensuring the same level of data integrity across both breeds.

"We prioritize producing cattle that offer greater predictability, efficiency and profitability for the cattlemen who rely on our bulls," Guy Colyer explains.

GENETICS THAT PERFORM WHERE IT COUNTS

The results of decades of disciplined selection are clearly visible in the 2025 American Hereford Association MyHerd benchmark report, which shows the Colyer cow herd ranking within the top half of the breed for nearly every measured trait and index.

The Colyer family has successfully combined curve-bending genetics with functional phenotype, resulting in cattle that perform. This balanced approach has contributed to the ranch's annual bull sale consistently ranking among the top 10 of annual Hereford bull sales, a distinction maintained more than 46 years.

Operating both Hereford and Angus programs gives the Colyers a distinct advantage in serving commercial producers who want to capture the benefits of heterosis.

"We believe in the value of heterosis and the role Hereford genetics play in producing productive black baldy females for western range environments," Colyer says.

The real-world results from commercial customers reinforce the claim: One producer reports a 96% rebreeding rate in resulting heifers, compared to 88% in straight Angus females.

FIVE DECADES OF TECHNOLOGY ADOPTION

The Colyer family's embrace of technology is not a recent development — it is a half-century tradition.

"The Colyer family has been an early adopter of technologies that advance both performance and carcass evaluation," Bedwell summarizes. *"From utilizing artificial insemination (AI) since the 1970s to incorporating embryo transfer (ET), IVF (in vitro fertilization) and ultrasound carcass data collection, the operation has continually embraced tools that drive measurable progress. Participation in programs such as the AHA's National Reference Sire Program further strengthens their ability to evaluate and validate genetics within the broader industry."*

On the data management front, Sherry helped develop one of the early computerized cow management programs in the 1980s, working alongside AHA's Everett Stoll, building interfaces between ranch systems and association databases.

Today, the ranch operates on the GEM livestock management platform, which centralizes all herd records, streamlines data submission to breed associations and models mating decisions by predicting EPDs across multiple sire options.

All mature cows carry tags that record heat activity and rumination, allowing AI to occur at each animal's optimal time. Most recently, the ranch implemented the Performance Livestock Analytics System to monitor feed consumption and feeding behavior by pen — adding nutritional precision to an already data-intensive operation.

The operation has also responded to emerging health concerns in the industry. At the request of progressive commercial customers, the Colyers recently implemented testing for bovine congestive heart failure (BCHF), with AI tools now used to assist in sorting and evaluating bulls across multiple economically relevant traits, including BCHF results.

BEYOND THE BULL SALE: A FULL-SERVICE GENETICS PARTNER

Colyer genetics are marketed to customers in 33 states and have been exported to seven foreign countries, yet the operation's identity remains firmly rooted in its relationship with the working commercial cattleman. The family will host its 47th Annual Bull Sale next February, but the Colyer marketing commitment extends well beyond sale day.

Their commitment to the "conception to consumption" chain is further evidenced by their direct involvement in marketing their customers' feeder cattle, ensuring Colyer genetics deliver value at every level of the beef industry.

Throughout the summer video auction season, at least one family member is present at major sales, including Superior Livestock Auction and Western Video Market, working alongside customers to help market their feeder calves and connecting buyers specifically seeking Colyer-sired cattle.

The operation is as much about the land and community as it is about the cattle. The ranch raises 100% of its own feed and uses 15 center pivot irrigation systems to maximize water efficiency in their arid environment.

Beyond the ranch gates, the Colyer family remains deeply embedded in their community and industry. With family members serving as EMTs, school board trustees and industry leaders, their impact extends far beyond the cattle they sell.

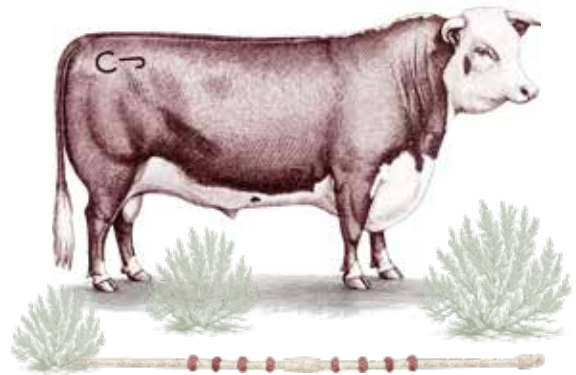

"Colyer Hereford and Angus is built on integrity, consistency and a clear focus on advancing the profitability of commercial cattle producers," Bedwell says.

After nearly 150 years in the business — and seven generations committed to leaving the land, the cattle and the industry stronger than they found them — Colyer Herefords and Angus is positioned for the future. ■

**COLYER HEREFORDS AND ANGUS
2026 SEEDSTOCK PRODUCER OF THE YEAR**

ALL ANIMALS IN THIS SALE ARE
GENOMICALLY ENHANCED

A N G U S

ANGUSGS

The American Angus Association incorporates genomic results into its genetic evaluation to produce genomically enhanced EPDs. By combining DNA information with pedigree and performance data, genomics helps increase EPD accuracy and provides a more precise estimate of an animal's genetic value.

H E R E F O R D

AHA
GE-EPD

The American Hereford Association's GE-EPDs incorporate genomic information with pedigree and performance data to increase EPD accuracy and improve the predictability of genetic merit. For younger, less-proven animals, genomic testing provides added confidence and enables more reliable selection and breeding decisions.

EVERY ANIMAL IN THIS CATALOG HAS GENOMICALLY ENHANCED EPDS

Originally, 6212 was selected to lead off the pair division alongside her outstanding dam, EXR BAILEES MCKEE 3244 ET. Tragically, shortly after pictures were taken, we unexpectedly lost 3244, cutting short the promising donor career of one of the most exciting young females in our program. She had quickly become a favorite among visitors who toured during the BIF Convention this summer.

While losing 3244 was a tremendous disappointment, 6212 now stands as one of the featured individuals in this offering. We believe she is our top horned show prospect, combining an elegant front end, a long, extended neck, high head carriage, and tremendous presence. Bold-ribbed, deep-bodied, square-hipped, and flawless in her structure, she offers the kind of phenotype that is increasingly difficult to find.

We have tremendous confidence that 6212 has an exciting future in both the show ring and the donor pen.

♦ ♦ ♦ ♦ SELLING ½ EMBRYO INTEREST WITH NO POSSESSION ♦ ♦ ♦ ♦

Cruz will campaign her as a bred & owned show heifer before embryo production is shared equally with the new owner.

Daughters of

BAILEE 0226

BAILEE 0226 has firmly established herself as one of the premier show heifer producers in our program. A Denver Champion herself, she combines exceptional body, power, and dimension with the unmistakable look that continues to make her daughters stand out in the ring. Her influence was further proven when her daughter, Brooklyn, claimed a Division Championship at the 2026 Junior National Hereford Expo, adding another milestone to this outstanding cow family's legacy. These four daughters represent four distinct mating decisions, yet each reflects the consistency, quality, and eye appeal that have become the hallmark of this remarkable donor.

LOT 08 While she certainly has the look to compete, this On Demand daughter may be the most maternally designed sister of the group. With her added body, brood cow look, and proven pedigree, we believe she has every opportunity to follow in 0226's footsteps as a future donor.

BAR JZ ON DEMAND ■ Sire of Lot 08

ilee

C GKB HENNESSY 4189 ET ■ Sire of Lot 9

LOT 09 The first daughters to sell by Hennessy, the anchor bull of our 2025 Denver Champion Pen of Three. His untimely loss left only a limited number of daughters, making opportunities like this incredibly rare. We believe these females are a testament to the quality and potential he was destined to leave behind.

LOT 10 The only horned sister of the group. Don't let her current condition fool you. Raised by a poor recipient, she's simply behind where we'd like her to be today. What she does have is an exceptionally attractive front end, a long, clean neck, and the kind of quality that can't be manufactured. With time and good management, we believe she has the potential to become one of the sleepers of the sale and an outstanding value for a buyer willing to look ahead.

Candy

The first ET daughter to sell from Cruz's successful bred-and-owned show heifer. Her dam was admired for her structural correctness, balance, and flawless hip and hind leg, and we believe this daughter carries those same strengths while adding extra muscle shape and a beautiful front end. Level-designed, exceptionally sound, and elegant through her front third, she has all the pieces to be one of the feature show heifer prospects in this year's offering.

C CUDA BELLE 2111 ■ Sire of Lot 11

C 88X SANCHESS LASS 3022 ■ Dam of Lot 11

Dianas

The influence of the Miles Diana cow family is woven throughout the Hereford breed, producing elite show cattle and influential donors for many years. Through 5355, these sisters represent one of the most proven show heifer pedigrees in the breed, combining generations of phenotype, consistency, and winning tradition.

MUCH BETTER THAN THIS!**

Powerful, attractive, and exceptionally well marked, she has all the pieces of a true sale feature. Her pedigree is anchored by our two most influential 88X daughters, 2052 and Notice Me 1311, whose influence has helped define the Colyer Herefords breeding program. As the foundation of the Blair cow family, 2052 established one of the most productive maternal lines we've ever developed, while Notice Me 1311 has continued that tradition as one of our premier donors. Add in an outstanding EPD profile, and you have a female with unlimited potential. **SELLING ½ INTEREST**
