Welcome

Z Arrow T RANCH 3rd ANNUAL PRODUCTION SALE

It is our pleasure to welcome you to the 3rd Annual Z Arrow T Ranch Production Sale.

We are proud to once again offer a strong, consistent set of bulls backed by the kind of cow herd we rely on every day. These cattle are built on generations of proven Mrnak genetics you know and trust. Our focus remains the same — raising cattle that are built to work for us, not the other way around.

This year's offering has been developed with that philosophy in mind. The bulls were summered on grass without creep feed and grown slowly after weaning on a carefully managed ration of Optimizer creep pellets, mineral, and grass hay. By developing them this way, we ensure they remain sound, functional, and ready to go to work — not just look good on sale day.

We take great pride in this offering. Each animal has been thoroughly evaluated for structure, soundness, disposition, and phenotype. All bulls have passed a breeding soundness exam and have been ultrasounded for carcass traits.

New this year, we are offering a select group of heifers.

This is not something we typically do, but due to a larger-than-expected heifer calf crop, we are making a portion of our replacement pen available. These heifers come straight from the heart of our program. This presents a unique opportunity to access the maternal foundation of our herd, and one that may not come around again. The heifers have also been ultrasounded for carcass traits and are vet checked to be breeding sound at the time of the sale.

As always, we stand behind our cattle and are here to support you long after sale day.

Also new this year, the sale will be broadcast on DV Auction, allowing you to view and bid online if you are unable to attend in person. We are excited to offer this option to better serve our customers and make our program more accessible.

Videos of the offering will be available prior to sale day. We encourage you to reach out with any questions or stop by to view the cattle anytime.

We don't raise the most — but we do everything we can to raise the best.

Thank you for your continued support of our program. We truly appreciate the trust you place in our cattle.

Wayne and Jill

Robyn and Erick

Sale information

3rd ANNUAL PRODUCTION SALE

May 3, 2026 . 3:00 p.m. (MT)

8904 146th AVE. S.W. • BOWMAN, ND

Wayne Mrnak 701-523-6368 | Robyn Mrnak 701-523-6407 | zarrowtranch@outlook.com

www.zarrowtranch.com

AUCTIONEER:

Scott Weishaar 701-426-6826

TERMS & CONDITIONS:

All purchases will be cash unless credit is arranged before the sale.

Each animal will be sold to the highest bidder. Bidding disputes will be settled by the auctioneer.

Health Certificates will be furnished.

Animals sold will be fed and cared for at purchaser's risk for a reasonable length of time or will be shipped as instructed.

Bulls are guaranteed breeders. All claims must be submitted in writing to the seller within 8 months of sale date, along with semen evaluation and health report from veterinarian, at buyer's expense. Seller shall have the right to try the bull after his return before making any adjustment.

This guarantee is void if there is evidence of improper management in caring for the animal or the animal's inability to breed is due to sickness or injury which incurred after being sold.

According to information available from the American Hereford Association and from our own experience, all cattle in this sale are I.E. & diluter free. No further guarantee is implied.

Any changes of information as it appears in this catalog will be announced at the time of sale. Such announcements will take precedence over the printed information in this catalog.

HEALTH:

These bulls are from a herd free from any known infections, contagious diseases, or physical abnormalities. Bowman Vet Clinic & West River Vet Clinic both manage the health of the herd.

DELIVERY:

300 miles free delivery at buyer and seller's convenience.

Cooperate on further hauls.

Will help line up transportation on any lots.

All cattle left at Z Arrow T to feed must be fully insured.

• We cannot say enough about the job PinPoint has done for us so far. His calves are moderate at birth with extra length and smooth fronted. His sons exhibit a lot of natural thickness, muscling, and eye appeal. His daughters are very feminine, long bodied, and smooth made. We are excited about the future of the PinPoint offspring in our operation.

• Purchased from Stuber Ranch, Bowman, ND; Owned with Doyle Herefords, Wolfe City, TX.

• DHR Stardance 672 L1 DOM 466 was purchased from Doyle Hereford Ranch, Wolfe City, Texas.
• He is a big spread, calving ease son of Stardance M8086 with value-added marbling.
• D466 is a short marked, well-balanced individual with an excellent numerical profile. His sire, Stardance, has given us an excellent set of females.
• We paired this bull with our replacement heifers and are excited to see his first calf crop this spring.

Z Arrow T RANCH

Understanding Hereford EPDs

The American Hereford Association (AHA) currently produces expected progeny differences (EPDs) for 17 traits and calculates three profit indexes. AHA's genetic evaluation makes use of a Marker Effects Model that allows the calculation of EPDs by incorporating the pedigree, phenotypic and genomic profile of an animal. Animals that have a genomic profile will be denoted with a GE-EPD logo.

The current suite of Hereford EPDs and profit indexes includes:

■ Calving Ease — Direct (CE)

CE EPD is based on calving ease scores and birth weights and is measured on a percentage. CE EPD indicates the influence of the sire on calving ease in females calving at 2 years of age. For example, if sire A has a CE EPD of 6 and sire B has a CE EPD of -2, then you would expect on average, if comparably mated, sire A's calves would have an 8 percent more likely chance of unassisted calving when compared to sire B's calves.

■ Birth Weight (BW)

BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average, if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD.

■ Weaning Weight (WW)

WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of 60 and sire B has a WW EPD of 40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lb. heavier at weaning when compared to sire B's calves.

■ Yearling Weight (YW)

YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

■ Dry Matter Intake (DMI)

The DMI EPD predicts the daily consumption of pounds of feed. For example, if sire A has a DMI EPD of 1.1 and sire B has a DMI EPD of 0.1, you would expect sire B's progeny, if comparably mated, to consume on average 1 pound of feed less per day.

■ Scrotal Circumference (SC)

Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality, and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty. Yearling sons of a sire with a 0.7 SC EPD should have yearling scrotal circumference measurements that average 0.7 centimeters (cm) larger than progeny by a bull with an EPD of 0.0 cm.

■ Sustained Cow Fertility (SCF)

The AHA's new SCF EPD is a prediction of a cow's ability to continue to calve from three years of age through 12 years of age, given she calved as a two-year-old. The EPD is expressed as a deviation in the proportion of the 10 possible calvings to 12 years old expressed as a probability. For example, the daughters of a bull with a 30 EPD would have the genetic potential to have one more calf by age 12 than the daughters from a bull with a 20 EPD. In other words, the daughters from the 30 EPD bull would have a 10% greater probability of having one more calf than the bull with a 20 EPD. This is equivalent to saying that the daughters are 10% more likely to remain in the herd to age 12.

■ Maternal Milk (MM)

The MM EPD of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

■ Maternal Milk & Growth (M&G)

The M&G EPD reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of the daughter's progeny weaning weight. A bull with a 29 lb. M&G EPD should sire daughters with progeny weaning weights averaging 19 lb. heavier than progeny of a bull's daughters with a M&G EPD of 10 lb. (29 minus 10 = 19 lb.). It is equal to one-half the sire's weaning weight EPD, plus all of his MM EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. It is sometimes referred to as "total maternal" or "combined maternal." Maternal Calving Ease (MCE) MCE EPD predicts how easily a sire's daughters will calve at two years of age and is measured on a percentage. For example, if sire A has a MCE EPD of 7 and sire B has a CE EPD of -3, then you would expect on average if comparably mated, sire A's daughters would calve with a 10% more likely chance of being unassisted when compared to sire B's daughters.

■ Mature Cow Weight (MCW)

The MCW EPD was designed to help breeders select sires that will either increase or decrease mature size of cows in the herd. The trait was developed after years of cow weight data collection and the EPD relates directly to the maintenance requirements of a cow herd. For example, if sire A has a MCW EPD of 100 and sire B has an EPD of 85, then you would expect the females of sire A, if comparably mated, to be 15 lb. heavier at mature size.

■ Udder suspension (UDDR)

UDDR EPDs are reported on a 9 (very tight) to 1 (very pendulous) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment.

For example, if sire A has a UDDR EPD of 0.4, and sire B has a UDDR EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score better udder suspension in daughters of sire A, compared to sire B.

■ Teat size (TEAT)

TEAT EPDs are reported on a 9 (very small) to 1 (very large, balloon shaped) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment. For example, if sire A has a teat size EPD of 0.4, and sire B has a teat size EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score smaller teat size in daughters of sire A, compared to sire B.

■ Carcass Weight (CW)

CW EPD is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight. For example, if sire A has a CW EPD of 84 and sire B has a CW EPD 64, then you would expect the progeny of sire A, if harvested at the same age constant endpoint, to have a 20-lb. advantage in terms of hot carcass weight.

■ Rib Fat (FAT)

The FAT EPD reflects differences in adjusted 365-day, 12th-rib fat thickness based on carcass measurements of harvested cattle. Sires with low, or negative FAT EPDs, are expected to produce leaner progeny than sires with higher EPDs. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

■ Ribeye Area (REA)

REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-muscled and higher percentage yielding slaughter progeny than sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

■ Marbling (MARB)

MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, [IMF]) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

■ Baldy Maternal Index (BMIS)

The BMIS is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of nonreplacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

■ Brahman Influence Index (BIIS)

The BIIS is a maternally focused index that is based on a production system that uses Brahman x Hereford cross cows. Progeny of these cows are directed towards a commodity beef market since Certified Hereford Beef® does not accept Brahman influenced cattle. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability in finishing nonreplacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep harvested progeny successful for a variety of commodity based programs. This index targets producers that use Hereford bulls on Brahman influenced cows.

■ Certified Hereford Beef Index (CHBS)

The Certified Hereford Beef Index (CHBS) is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows where all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight and Marbling to ensure profit on the rail. As well there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. In addition, there is a positive weighting for Rib-eye Area and a negative weighting for Back Fat to maintain desirable Yield Grades. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.
