Second Annual

Fall Bull Sale

THURSDAY, OCTOBER 9, 2025

12 noon at the GKB Sale Headquarters, Desdemona, Texas

GPS address: 7440 TX 16, Desdemona, TX 76445

80 Hereford, 11 Angus, 12 Red Angus & 12 SimAngus Bulls

GE-EPDs plus individual performance & ultrasound data included

All bulls are available to view at the Desdemona ranch until sale time.

Lunch and refreshments will be available sale day.

Dear Friends,

It is with great pleasure that we welcome you to our Second Annual Fall Bull Sale. GKB Cattle is excited to offer registered Hereford, Angus, Red Angus and SimAngus bulls in this fall sale.

We are very proud of the bulls that make up this offering, as the quality runs deep. Phenotypically, they are a stout and rugged set of bulls that are ready to go to work in the pasture. The bulls have been through a stringent selection process, where emphasis is put on structural integrity, muscularity, real world performance, and fleshing ease. It has also always remained our priority that they must start with good feet and legs.

When making our selections at GKB Cattle, we continue to place a strong emphasis on the maternal aspect of our herd sire battery. We believe that every great breeding bull is backed by an even better female. Maternal stability increases performance, fertility, and longevity, all of which are essential traits of the modern day beef production cycle. Through focusing on superior sire selection, we can achieve these traits.

We are offering herd bulls for commercial operations as well as bulls designed to perform in a purebred herd. We truly believe that the individuals in the offering have a tremendous amount of potential to be sires with true impact and influence within the beef business. Come early and view what we have to offer your program. Videos of the sale bulls will be available at gkbcattle.com, Live-Ag.com and LiveAuctions.TV.

Your success is our success! We want to thank all of our customers for your continued support, as we wouldn't be able to do this without you, the customer! **We look forward to seeing you in Desdemona, Texas, Thursday, October 9, 2025.**

ABSENTEE BIDDING

Online bidding will be available on both the Live-Ag.com and LiveAuctions.TV websites. High-speed internet is required. You may also contact any of the above representatives to place a bid.

"SIGHT-UNSEEN GUARANTEE"

To make buying easy, we offer a sight-unseen guarantee. Leave a bid...buy over the phone...buy online. If they don't meet your approval, they come home. It's that simple.

INSURANCE

Livestock mortality insurance will be available sale day.
 Jim Bessler, James F. Bessler, LLC • (815) 762-2641

SALE TERMS

Terms of the sale are cash or check. Cattle will be sold to the highest bidder. The auctioneer shall settle any disputes as to bids. All cattle are to be paid for by the purchaser during or immediately following the sale and will not be released until after settlement has been made. Each animal will be at the purchaser's risk immediately after it is sold.

HEALTH

The health of the bulls selling is excellent. Each animal will be accompanied by an individual health certificate for immediate interstate shipment. Note: If bulls should go to a state that requires additional testing, bulls will be delivered to the new owner after testing is completed.

GUARANTEE

Each bull will sell under the Suggested Sale Terms and Conditions of his respective breed association.

BREEDING GUARANTEE

Bulls sold in this sale are fertility tested and are guaranteed by GKB Cattle to be breeders, provided they are properly handled and cared for by the purchaser. Any bull failing to breed after a trial of six months may be returned to the seller if in good condition. The seller reserves the right to try said bull for six months, and if he proves a breeder to return him to the buyer at buyer's expense. If the bull proves a non-breeder, the bull will be replaced or credit will be issued for a future GKB Cattle sale at the purchase price minus salvage value of the bull. Seller is not liable for bulls lost due to injury or death.

EXPECTED PROGENY DIFFERENCES

Genomic-enhanced EPDs are included on the bulls selling. EPDs are updated weekly by the breed associations, so we cannot guarantee the EPDs listed in the catalog. The EPDs printed were current 8/22/25. Current EPDs can be viewed on the association website.

ANNOUNCEMENTS

Announcements made sale day from the auction block will take precedence over statements in the catalog or other advertising. We reserve the right to withdraw any sale lot not meeting our specifications prior to sale time.

LIABILITY

All persons who attend the sale do so at their own risk. Neither the owners nor any other persons connected with the sale assume liability, legal or otherwise, for accidents or loss of property. As the sale manager, Layton Auction Services, LLC is only an agent for the seller and has no responsibilities other than those involved in conducting the sale.

Using EPDs as Selection Tools

Cattle Evaluations use the term Expected Progeny Difference (EPD) to express genetic transmitting ability of a sire for the various traits listed. An EPD is a prediction of how future progeny of a sire are expected to perform in a particular trait, relative to other sires in the analysis. The key word is "difference." The EPD itself does not imply "good" or "bad" performance; rather, the EPD gives a prediction of the average "difference" to expect in the performance of a sire's progeny relative to other sires in the same analysis.

The EPD for a given trait on each animal in the analysis is compared to every other animal in the analysis. The EPD is reported as a plus or minus value in the unit which the trait is measured. EPD accuracies on non-parent animals are relatively low and are not reported in this catalog. The American Hereford Association (AHA) currently produces expected progeny differences (EPDs) for 17 traits and calculates three profit indexes. AHA's genetic evaluation makes use of a Marker Effects Model that allows the calculation of EPDs by incorporating the pedigree, phenotypic and genomic profile of an animal.

Hereford EPDs and \$ Indexes included in this sale catalog are:

Calving Ease Direct (CED) Based on calving ease scores and birth weights and measured on a percentage. CED EPD indicates the influence of the sire on calving ease in females calving at two years of age. For example, if sire A has a CED EPD of 6 and sire B has a CED EPD of -2, then you would expect on average if comparably mated, sire A's calves would be born with an 8% more likely chance of being unassisted when compared to sire B's calves.

Birth Weight EPD (BW) An indicator trait for calving ease, measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty.

Weaning Weight EPD (WW) An estimate of pre-weaning growth, measured in pounds.

Yearling Weight EPD (YW) An estimate of post-weaning growth, measured in pounds.

Scrotal Circumference EPD (SC) Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty.

Sustained Cow Fertility (SCF) A prediction of a cow's ability to continue to calve from three years of age through twelve years of age, given she calved as a two-year-old. For example, the daughters of a bull with a +30 EPD would have the genetic potential to have one more calf by age twelve than the daughters from a bull with a +20 EPD (a 10% greater chance).

Maternal Milk EPD (Milk) The milking ability of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. This difference in weaning weight is due to total milk production during the entire lactation.

Maternal Milk + Growth EPD (M+G) Reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of daughters' progeny weaning weight. It is equal to one-half the sire's weaning weight EPD, plus all of his Milk EPD.

Udder Suspension (Udder) Udder EPDs are reported on a 9 (very tight) to 1 (very pendulous) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment.

Teat Size (Teat) Teat EPDs are reported on a 9 (very small) to 1 (very large, balloon shaped) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment.

Calving Ease Maternal (CEM) Predicts how easily a sire's daughters will calve at two years of age and measured on a percentage. For example, if sire A has a CEM EPD of +7 and sire B has a CEM EPD of -3, then you would expect on average if comparably mated, sire A's daughters would calve with a 10% more likely chance of being unassisted when compared to sire B's daughters.

Carcass EPDs

Carcass records are adjusted to an age constant endpoint. Therefore, selection based on any or all of the carcass merit EPD is comparable among cattle at the same age endpoint. For example, selection based on increased EPD for carcass weight will result in heavier carcass weights than those animals with lower EPD for carcass weights when the cattle are harvested at the same age.

Carcass Weight EPD (CW) Carcass weight is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight.

American Hereford Assn. EPD Averages for 2023- & 2024-born calves:

CED	BW	WW	YW	SC	SCF	Milk	M+G	Udder	Teat
+3.4	+2.6	+56	+90	+1.0	+17.2	+27	+55	+1.3	+1.3
CEM	CW	REA	Marb	BMIS			BIIS	CHBS	
+1.6	+71	+46	+14	+369			+445	+121	

Ribeye Area EPD (REA) REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Marbling Score (Marb) Marbling EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat (IMF) based on carcass measurements of harvested cattle. Breeding cattle with higher Marb EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

\$Profit Indexes

Baldy Maternal Index (BMIS) The Baldy Maternal Index is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed toward Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake but a positive weighting on Carcass Weight, which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Ribeye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

Brahman Influence Index (BIIS) The Brahman Influence Index is a maternally focused index that is based on a production system that uses Brahman x Hereford cross cows. Progeny of these cows are directed toward a commodity beef market, since Certified Hereford Beef does not accept Brahman-influenced cattle. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk, which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake but a positive weighting on Carcass Weight, which is anticipated to provide profitability in finishing non-replacement females and castrated males. Marbling and Ribeye Area are also positively weighted to keep harvested progeny successful for a variety of commodity based programs. This index targets producers who use Hereford bulls on Brahman-influenced cows.

Certified Hereford Beef Index (CHBS) The Certified Hereford Beef Index is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows and all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight to ensure profit on the rail. As well, there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. Keep in mind, this production system takes advantage of complimentary breeding with the commercial Angus cow. Although Marbling is weighted positively in this index, a positive weighting for Ribeye Area and a negative weighting for Back Fat are a greater priority in this index to allow for optimum end-product merit. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.

Genomic-Enhanced EPDs The accuracy of breeding values in young cattle is enhanced with DNA testing. The EPDs included are genomically enhanced for the advantage of enhanced accuracy.

Actual birth weight is included in addition to adjusted 205-day weaning weight, adjusted 365-day yearling weight, adjusted 365-day ribeye area and adjusted 365-day intramuscular fat score.

Actual scrotal circumference, measured in centimeters, will be available on the sale supplement.

THE POWER OF GENOMICALLY ENHANCED EPDS

The American Hereford Association (AHA) has embraced the use of genomics into their genetic evaluation by launching a first of its kind single step analysis that utilizes the marker effects of specific traits. Likewise, AHA is directly estimating accuracy values rather than approximating. The direct estimation of accuracy results in a more conservative value but a more accurate value than previous methodologies. The AHA is producing the most reliable genetic evaluation that is supported by Whole Herd TPR™ and genomics, which will give prospective buyers added confidence in purchasing young and unproven animals.

Buying animals that have a genomic profile incorporated into their Expected Progeny Difference (EPD) offers many advantages that allow for quicker breed and herd improvement. To the right is a table showing the average increase in accuracy when buying a young animal with a Genomic Enhanced EPD (GE-EPD) versus an animal without a GE-EPD. Similarly, an effective progeny number increase is listed by trait that shows how many progeny equate to a genomic enhancement of a young animal (e.g. yearling). That's right, buying a young animal that has been genotyped is like having 2-17 progeny, depending on the trait. The proof gained on young, non-parent animals, through a genomic enhancement is valuable and greatly mitigates the risk and allows for more directed selection.

AHA TRAIT	ACCURACY IMPROVEMENT	EFFECTIVE PROGENY NUMBER INCREASE*
CALVING EASE	0.09	17
BIRTH WEIGHT	0.12	8
WEANING WEIGHT	0.14	12
YEARLING WEIGHT	0.16	9
SCROTAL CIRCUMFERENCE	0.17	6
MATURE COW WEIGHT	0.12	4
UDDER SUSPENSION	0.17	7
TEAT SIZE	0.17	7
CARCASS WEIGHT	0.11	3
FAT	0.08	2
RIB-EYE AREA	0.07	2
MARBLING	0.10	3

* Effective Progeny Number Increase (EPNI)- EPNI is the difference gained for genotyped animals versus non-genotyped animals.

Each animal tested is recognized with the AHA GE-EPD logo.

HEREFORD \$CHB ADVANTAGE

An industry-changing program from the American Hereford Association and IMI Global to verify and add value to Hereford-influenced feeder cattle

Hereford Association and IMI Global to verify with superior genetics, health and management.

REQUIREMENTS

Source and age verification | Genetic merit: *Minimum of 50% Hereford genetics and bull battery ranking in the top 50% of breed for \$CHB index (bull battery average)* | Two rounds of vaccinations prior to shipping: *2 doses of 7-way, 8-way or 9-way clostridial, 2 doses respiratory modified live* | BQA certification

BENEFITS

Genetic improvement tool | *Sire EPD and profit index summary* | Added market exposure | *Free listing at HerefordMarketplace.com* | Enrollment cost \$3.25/head (verification + eID tag)

- Pigmentation: LEFT EYE 0% / RIGHT EYE 0% / SCROTUM 50%
- 4198 is a widely constructed, big hiped, soggy made bull that has exceptional performance both on paper and in the flesh. He is the No. 2 bull for adjusted weaning weight and the No. 3 bull for adjusted yearling weight in the Hereford offering.
- His dam combines the influential donors Lana 76E and Belle 4082, which further solidifies his maternal strength and supports his impressive performance.
- Ranks in the top 1% for YW and SC; top 2% for WW; top 5% for M&G; top 9% for CW and top 11% for CHB.

- Ranks in the top 1% for Teat and top 2% for Udder.

HOW TO WATCH THE SALE & BID ONLINE

www.live-ag.com
(817) 533-6699

- **Go to www.live-ag.com**
Click on the "Purebred" tab under "Auctions," located at the top right of the screen. Select the auction of choice.
- **Log in / Create an account**
Select "log in or create an account to bid." Log in with your email and password, or click "create an account." Fill out the required fields to bid online. Agree to the terms of service and finish with the "register" button.
- **Register to bid**
Once logged in and a sale of choice has been selected, click "register to bid." Agree to terms and conditions and click the "register" button. Pending request will be approved in a timely manner.

www.liveauctions.tv
(682) 816-4900
techsupport@liveauctions.tv

- **Go to www.liveauctions.tv**
Click "Register to Bid" on the top right corner. Fill out the required information, agree to the terms and finish with the "register" button.
- **Register for a buyer number**
From the home page or the "all auctions" page, choose the sale. Click the "request a buyer number" button. Verify your email address. To verify your mobile number, click "send token." Follow the steps to authorize your mobile device and click "submit."
- **Bid successfully**
You will only need to complete the two-step verification one time. You will then be able to immediately request a buyer number on any auction without verification. If you're a winning bidder, your lots will appear in your cart on the bottom of your screen.

WIN A HUGHES TRAILER!

A custom built trailer will be given away at the conclusion of the sale. **Your buyer number will be entered in a drawing each time you purchase a bull in this sale.** The number drawn will be the recipient of a custom built trailer manufactured by Hughes Trailers in Canyon, Texas. The more bulls you buy, the more chances you have to win! Need not be present to win.

Buy a bull... Win a trailer!

Angus Bulls

Lots 81–91

American Angus Assn. Selection Tools

Expected Progeny Difference (EPD) is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. All Angus EPDs in this catalog are genomically enhanced to give you increased reliability.

Angus EPDs and \$Value Indexes included in our sale catalog are:

Calving Ease Direct (CED), expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight EPD (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Yearling Weight (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Scrotal Circumference (SC), expressed in centimeters, is a predictor of the difference in transmitting scrotal size compared to that of other sires.

Dolcility (Doc) expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable dolcility in a sire's offspring compared to another sire.

Heifer Pregnancy (HP) is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction, and the EPD is reported in percentage units.

Calving Ease Maternal (CEM), expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Maternal Milk (Milk), expressed in pounds of calf weaned, is a predictor of a sire's genetic merit for milk and mothering ability in his daughters. In other words, it is the part of the calf's weaning weight attributes to milk and mothering ability.

Carcass EPDs

Carcass Weight (CW), expressed in pounds, is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling (Marb), expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

American Angus Assn. Fall 2025 EPD Averages for non-parent bulls:

CED	BW	WW	YW	SC	Doc	HP	CEM	Milk
+6	+1.3	+65	+115	+86	+18	+11	+8	+26
CW	Marb	RE	SM	SW	\$F	\$G	\$B	\$C
+49	+64	+63	+60	+61	+94	+51	+147	+252

\$Value Indexes

\$Value Indexes, expressed in dollars per head, are multi-trait selection indexes where a higher value suggests more profit. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires if sires were randomly mated to cows and if calves were exposed to the same environment.

Maternal Weaned Calf Value (\$M), expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning by decreasing mature cow size and improving dolcility, foot structure and fertility while maintaining weaning weights consistent with today's production.

Weaned Calf Value (\$W), expressed in dollars per head, provides the expected difference in future progeny pre-weaning performance from birth to weaning.

Feedlot Value (\$F), expressed in dollars per head, is the expected average difference in future progeny performance for post-weaning feedlot merit (growth and feed efficiency) compared to progeny of other sires assuming producers retain ownership of cattle through the feedlot phase and sell on a carcass-weight basis.

Grid Value (\$G), expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes, compared to progeny of other sires.

Beef Value (\$B), expressed in dollars per carcass, represents the expected average differences in the progeny post-weaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot and sell on a carcass merit grid.

Combined Value (\$C), expressed in dollars per head, which includes all traits that make up both Maternal Weaned Calf Value (\$M) and Beef Value (\$B) with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and sell them on a quality-based carcass merit grid.

EPDs are updated weekly by the American Angus Association, so we cannot guarantee the EPDs listed in the catalog. The Angus EPDs printed are from the 8/22/25 evaluation of the AAA. View up-to-date EPDs at www.angus.org.

Genomic-Enhanced EPDs The accuracy of breeding values in young cattle is enhanced with DNA testing. The Angus EPDs in this catalog are genomically enhanced, indicated by the AGI GE-EPD symbol.

BUY BULLS ON TARGET

Minimum Genetic Requirements

	Value
Marbling EPD (Marb)	+0.65
Dollar Grid Carcass Index (\$G)	+55.0

There's more data than ever available on today's sire prospects. As commercial producers try to balance numerous traits in sire selection, this logo helps you easily find Angus bulls with added carcass value. The Targeting the Brand™ logo does the math, simplifying the selection process. This logo is designed to highlight registered Angus bulls with greater genetic potential to produce calves meeting the most challenging specifications of the Certified Angus Beef® brand. Bulls must meet the minimum genetic requirements of +.65 Marbling EPD and +55 \$Grid for non-parent Angus bulls to qualify for use of the Targeting the Brand™ logo. Sire-identified carcass data in the American Angus Association database show these minimum thresholds for Marbling and \$G achieve an average of 50% CAB acceptance. While a sire's genetic potential only accounts for a portion of marbling performance in a calf crop, these benchmarks provide commercial cattlemen a starting place to identify genetics that will go on to bring performance premiums on quality beef grids. To make more significant carcass advancement or for those already achieving 50% or higher CAB acceptance, breeders may set bull selection criteria above Targeting the Brand™ baselines.
