GREETINGS!

Welcome to the 4th Annual Gulf South Hereford Association's consignment sale! Our cattle and genetics offerings get better every year, and this year is outstanding. Whether you are looking to re-sock, upgrade, or build your herds, there's something in this sale just for you.

We offer polled, horned, and Hereford influence F-1 crosses. Plus, an opportunity to gain some superior genetics via embryos and flushes.

The sale will be held on Saturday, April 26th, at the Blackjack Ranch (formerly 7L Farm) in Wiggins, Mississippi. Sale starts at 11 a.m. Food is offered beginning at 10 a.m. If you are unable to attend in person, please catch the sale on LiveAuctions.tv. Check out the Gulf South Hereford Association's Facebook page for updates and pictures of offerings.

Cattle will be available for viewing on Friday, April 25th and Saturday morning April 26th before the sale. Breeders will be available to answer questions and talk cattle.

Hope to see you there. Always good people, good food, and a good time!

If you have any questions, please feel free to contact me or one of our board members.

Thank you,

Ed Statham

Ed Statham, GSHA President
985-205-7454

OFFICERS and BOARD MEMBERS

Ed Statham, President	985-205-7454
Brett Douchard, Vice President	601-754-7240
Taylor Baker, Secretary	601-964-1522
Ramona Roberts, Treasurer	601-408-4826
Ammon Herring, Board	601-964-0534
Kay Lewis, Board	985-516-1643
Will Roberts, Board	601-543-7365

TERMS: Terms of the sale are cash unless prior credit arrangements are made between buyer and seller. Settlements are to be made with the clerk following the conclusion of the auction. All animals will be at the buyer's risk as soon as the animals are declared sold. Sale personnel will assist in loading or boarding of animals in compliance with the wishes of the new owner. Stock must be picked up on the day of sale unless prior arrangements have been made with Black Jack Ranch and the consignor.

CATALOG MATERIAL: Statements made at the sale take precedence over material printed in this catalog.

LIABILITY: Any people attending the sale do so at their own risk. The consignors, sale staff and personnel do not assume any liability, legal or otherwise.

REGISTRATION CERTIFICATES: An American Hereford Association certificate of registration will be transferred to the new owner at the seller's expense.

EPDS: EPDs in the catalog as of March 10, 2025.

HEALTH: Gulf South Hereford Association is proud of the quality of the stock we offer. Towards that end, all animals have been screened for genetic defects, have a health certificate issued by a vet, and have required vaccinations.

GENETIC DEFECTS: All beef breeds have genetic defects. It is to the best of our knowledge that all animals being offered are free of known genetic defects.

DELIVERY: The sellers will work with you to get your stock delivered to your operation as efficiently as possible. If you need delivery, please contact any of the sellers.

BREEDING GUARANTEE: All animals sold in this sale are guaranteed by the consignor to be breeders, provided they are properly handled and cared for by the purchaser. If any animal fails to breed, the seller must be notified within six months of the date of sale; otherwise, the animal is no longer guaranteed in any way. If the animal is in a sound, healthy condition, buyer may return it to seller, who shall have six months to get it with calf, refund the purchase price, or furnish another animal of equal value.

4th Consignment Sale

APRIL 26, 2025
Starts at 11 a.m.

Breakfast available starting at 10:30 a.m.

- Here is a pair of yearling paternal sisters that are uniform in their like and kindness. They are sired by our herd sire, 4M Mr Churchill Demo 1231 [HH Advance 4075B Grandson]. These two females are square hiped, deep sided and clean made through their front 1/3. Their dams are consistent, easy keeping and have good udders. These females are going to be fun to watch.

• Sired by the 1323 bull that was our lead herd sire for several years, we hold these females in high regard. This Maple cow family always produces good milking females with outstanding udders. 1913's 12-year-old mother and full sister are still producing for us and are both AHA Dams of Distinction. Pasture exposed 11/18/24 to 12/22/24 to EFBEEF B413 Validated J826 (P44434396) and from 12/23/24 to 1/18/25 to WMC 10E A154 Ozark 103K (P44370165).

YOUR SUCCESS *Our Passion.*

UNDERSTANDING HEREFORD EPDS

The American Hereford Association (AHA) currently produces expected progeny differences (EPDs) for 17 traits and calculates three profit indexes. AHA's genetic evaluation makes use of a Marker Effects Model that allows the calculation of EPDs by incorporating the pedigree, phenotypic and genomic profile of an animal. Animals that have a genomic profile will be denoted with a GE-EPD logo.

The current suite of Hereford EPDs and profit indexes includes:

Calving Ease – Direct (CE)

CE EPD is based on calving ease scores and birth weights and is measured on a percentage. CE EPD indicates the influence of the sire on calving ease in females calving at 2 years of age. For example, if sire A has a CE EPD of 6 and sire B has a CE EPD of -2, then you would expect on average, if comparably mated, sire A's calves would have an 8 percent more likely chance of unassisted calving when compared to sire B's calves.

Birth Weight (BW)

BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average, if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD.

Weaning Weight (WW)

WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of 60 and sire B has a WW EPD of 40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lb. heavier at weaning when compared to sire B's calves.

Yearling Weight (YW)

YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

Dry Matter Intake (DMI)

The DMI EPD predicts the daily consumption of pounds of feed. For example, if sire A has a DMI EPD of 1.1 and sire B has a DMI EPD of 0.1, you would expect sire B's progeny, if comparably mated, to consume on average 1 pound of feed less per day.

Scrotal Circumference (SC)

Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality, and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty. Yearling sons of a sire with a 0.7 SC EPD should have yearling scrotal circumference measurements that average 0.7 centimeters (cm) larger than progeny by a bull with an EPD of 0.0 cm.

Sustained Cow Fertility

The AHA's new SCF EPD is a prediction of a cow's ability to continue to calve from three years of age through 12 years of age, given she calved as a two-year-old. The EPD is expressed as a deviation in the proportion of the 10 possible calvings to 12 years old expressed as a probability. For example, the daughters of a bull with a 30 EPD would have the genetic potential to have one more calf by age 12 than the daughters from a bull with a 20 EPD. In other words, the daughters from the 30 EPD bull would have a 10% greater probability of having one more calf than the bull with a 20 EPD. This is equivalent to saying that the daughters are 10% more likely to remain in the herd to age 12.

Maternal Milk (MM)

The MM EPD of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than

daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

Maternal Milk & Growth (MGG)

The MGG EPD reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of the daughter's progeny weaning weight. A bull with a 29 lb. MGG EPD should sire daughters with progeny weaning weights averaging 19 lb. heavier than progeny of a bull's daughters with a MGG EPD of 10 lb. (29 minus 10 = 19 lb.). It is equal to one-half the sire's weaning weight EPD, plus all of his MM EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. It is sometimes referred to as "total maternal" or "combined maternal."

Maternal Calving Ease (MCE)

MCE EPD predicts how easily a sire's daughters will calve at two years of age and is measured on a percentage. For example, if sire A has a MCE EPD of 7 and sire B has a CE EPD of -3, then you would expect on average if comparably mated, sire A's daughters would calve with a 10% more likely chance of being unassisted when compared to sire B's daughters.

Mature Cow Weight (MCW)

The MCW EPD was designed to help breeders select sires that will either increase or decrease mature size of cows in the herd. The trait was developed after years of cow weight data collection and the EPD relates directly to the maintenance requirements of a cow herd. For example, if sire A has a MCW EPD of 100 and sire B has an EPD of 85, then you would expect the females of sire A, if comparably mated, to be 15 lb. heavier at mature size.

Udder suspension (UDDR)

UDDR EPDs are reported on a 9 (very tight) to 1 (very pendulous) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment. For example, if sire A has a UDDR EPD of 0.4, and sire B has a UDDR EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score better udder suspension in daughters of sire A, compared to sire B.

Teat size (TEAT)

TEAT EPDs are reported on a 9 (very small) to 1 (very large, balloon shaped) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment. For example, if sire A has a teat size EPD of 0.4, and sire B has a teat size EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score smaller teat size in daughters of sire A, compared to sire B.

Carcass Weight (CW)

CW EPD is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight. For example, if sire A has a CW EPD of 84 and sire B has a CW EPD 64, then you would expect the progeny of sire A, if harvested at the same age constant endpoint, to have a 20-lb. advantage in terms of hot carcass weight.

Rib Fat (FAT)

The FAT EPD reflects differences in adjusted 365-day, 12th-rib fat thickness based on carcass measurements of harvested cattle. Sires with low, or negative FAT EPDs, are expected to produce leaner progeny than sires with higher EPDs. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Ribeye Area (REA)

REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Marbling (MARB)

MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, [IMF]) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Baldy Maternal Index (BMIS)

The BMIS is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of nonreplacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

Brahman Influence Index (BIIS)

The BIIS is a maternally focused index that is based on a production system that uses Brahman x Hereford cross cows. Progeny of these cows are directed towards a commodity beef market since Certified Hereford Beef® does not accept Brahman influenced cattle. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability in finishing nonreplacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep harvested progeny successful for a variety of commodity based programs. This index targets producers that use Hereford bulls on Brahman influenced cows.

Certified Hereford Beef Index (CHBS)

The Certified Hereford Beef Index (CHBS) is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows where all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight and Marbling to ensure profit on the rail. As well there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. In addition, there is a positive weighting for Rib-eye Area and a negative weighting for Back Fat to maintain desirable Yield Grades. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.

PROVEN GENETICS ENHANCED PERFORMANCE

Vanguard #44021997

SF1345 Victor 2304 #44391138

SF 1338 Victoria 1713 #43802216 (Dam)

SF 1711 Victor 1903 #44012742
(Maternal Brother)

"To review all of the performance records established by cattle from this herd would take volumes, for at test stations across the land, they set high performance marks with such regularity that they became the standard by which others were measured. In 1966, it was the Hones-bred bull RWJ Victor F18 K47 that sired the John Finch Victor K47 K1 that set an all-breeds record of 4.5 pounds ADG on official 140-day central station test. Then in 1972, 24 Jones bulls an adjusted 365-day weight of 1,174 pounds - highest ever recorded on APHA's Guide Lines Program. One bull in that group scored an impressive 1,429 pounds, second high officially recorded yearling weight in the breed's history."

~ Excerpt from 1975 article

**RWJ Herd
Dispersed for
World-Record
Average**

Original article
from the September 15, 1975 edition
of Polled Hereford World.

For five decades, I've line-bred the renowned RW Jones Victor Domino bloodline, including top bulls and cows from Pat Wilson's Crooked Lake Herd. Four years ago, I introduced an out-cross using Jim Birdwell's Vanguard bull—producing my heaviest weaning weight and two-year-old to date while preserving the signature Victor phenotype.

Now offering five elite heifers: three sired by Vanguard and two by his top-performing sons, all from straight Victor dams. They are bred to SF 1345 Victor 2304, a promising young Victor bull.

Cattle First.

5% Sterile Solution Extended-Release Injectable
For Subcutaneous Use
Parasiticide for Cattle on Pasture

For the Treatment and Control of Internal and External Parasites of Cattle on Pasture with Persistent Effectiveness

Not for use in female dairy cattle 20 months of age or older, including dry dairy cows. Not for use in calves to be processed for veal.

Not for use in breeding bulls, or in calves less than 3 months of age.

Not for use in cattle managed in feedlots or under intensive rotational grazing.

Caution: Federal law restricts this drug to use by or on the order of a licensed veterinarian.

INDICATIONS FOR USE

LONGRANGE, when administered at the recommended dose volume of 1 mL per 110 lb (50 kg) body weight, is effective in the treatment and control of the following internal and external parasites of cattle:

Gastrointestinal Roundworms	Lungworms
<i>Bunostomum phlebotomum</i> – Adults and L ₄	
<i>Cooperia oncophora</i> – Adults and L ₄	<i>Dictyoaculus viviparus</i> – Adults
<i>Cooperia punctata</i> – Adults and L ₄	
<i>Cooperia surrabadia</i> – Adults and L ₄	Grubs
<i>Haemonchus placei</i> – Adults	
<i>Oesophagostomum radiatum</i> – Adults	<i>Hypoderma bovis</i>
<i>Ostertagia lyrata</i> – Adults	
<i>Ostertagia ostertagi</i> – Adults, L ₄ and inhibited L ₄	Mites
<i>Trichostrongylus axei</i> – Adults and L ₄	
<i>Trichostrongylus colubriformis</i> – Adults	<i>Sarcoptes scabiei</i> var. <i>bovis</i>

DOSAGE AND ADMINISTRATION

LONGRANGE® (eprinomectin) should be given only by subcutaneous injection in front of the shoulder at the recommended dosage level of 1 mg eprinomectin per kg body weight (1 mL per 110 lb body weight). Each mL of LONGRANGE contains 50 mg of eprinomectin, sufficient to treat 110 lb (50 kg) body weight. Divide doses greater than 10 mL between two injection sites to reduce occasional discomfort or site reaction.

Body Weight (lb)	Dose Volume (mL)
110	1
220	2
330	3
440	4
550	5
660	6
770	7
880	8
990	9
1100	10

Do not underdose. Ensure each animal receives a complete dose based on a current body weight. Underdosing may result in ineffective treatment, and encourage the development of parasite resistance.

WARNINGS AND PRECAUTIONS

Withdrawal Periods and Residue Warnings

Animals intended for human consumption must not be slaughtered within 48 days of the last treatment. This drug product is not approved for use in female dairy cattle 20 months of age or older, including dry dairy cows. Use in these cattle may cause drug residues in milk and/or in calves born to these cows. A withdrawal period has not been established for pre-ruminating calves. Do not use in calves to be processed for veal.

User Safety Warnings

Not for Use in Humans. Keep this and all drugs out of the reach of children. Reproductive and developmental toxicities have been reported in laboratory animals following high, repeated exposures to N-methyl-2-pyrrolidone (NMP). Pregnant women should wear gloves and exercise caution or avoid handling this product. The Safety Data Sheet (SDS) contains more detailed occupational safety information.

To report adverse effects, to obtain an SDS, or for assistance, contact Boehringer Ingelheim Animal Health USA Inc. at 1-888-637-4251. For additional information about adverse drug experience reporting for animal drugs, contact FDA at 1-888-FDA-VETS or www.fda.gov/reportanimalae.

Animal Safety Warnings and Precautions

The product is likely to cause tissue damage at the site of injection, including possible granulomas and necrosis. These reactions have disappeared without treatment. Local tissue reaction may result in trim loss of edible tissue at slaughter.

Observe cattle for injection site reactions. If injection site reactions are suspected, consult your veterinarian. This product is not for intravenous or intramuscular use. Protect product from light. LONGRANGE® (eprinomectin) has been developed specifically for use in cattle only. This product should not be used in other animal species.

When to Treat Cattle with Grubs

LONGRANGE effectively controls all stages of cattle grubs. However, proper timing of treatment is important. Consult your veterinarian concerning the proper time for treatment.

Environmental Hazards

Not for use in cattle managed in feedlots or under intensive rotational grazing because the environmental impact has not been evaluated for these scenarios.

Other Warnings: Parasite resistance may develop to any dewormer, and has been reported for most classes of dewormers.

Fecal examinations or other diagnostic tests and parasite management history should be used to determine if the product is appropriate for the herd/flock, prior to the use of any dewormer. Following the use of any dewormer, effectiveness of treatment should be monitored (for example, with the use of a fecal egg count reduction test or another appropriate method).

A decrease in a drug's effectiveness over time as calculated by fecal egg count reduction tests may indicate the development of resistance to the dewormer administered. Your parasite management plan should be adjusted accordingly based on regular monitoring.

Macrocyclic lactones provide prolonged drug exposure that may increase selection pressure for resistant parasites. This effect may be more pronounced in extended-release formulations.

TARGET ANIMAL SAFETY

Not for use in bulls, as reproductive safety testing has not been conducted in males intended for breeding or actively breeding. Not for use in calves less than 3 months of age because safety testing has not been conducted in calves less than 3 months of age.

STORAGE

Store at 77° F (25° C) with excursions between 59° and 86° F (15° and 30° C). Protect from light. This information is not comprehensive. Consult your veterinarian for more information. Visit <https://bi-animalhealth.com/cattle/products/longrange> for the FDA approved product label.

INVESTING IN LONGRANGE® [EPRINOMECTIN]
DOESN'T JUST TIP THE SCALES IN YOUR FAVOR.

**IT DARN NEAR
BREAKS THEM.**

Getting more from your dewormer starts with a proven investment. LONGRANGE is the first and only dewormer that provides up to 150 days of parasite control.¹ It's how top producers help their herds pack on the pounds, and in turn, bank more bucks. LONGRANGE is the difference between being average and being at the top of your game. So, next time you're deworming cattle, don't just get the job done. **Get it outdoors.**

**PROVEN TO PAY OFF IN
