2026 SPRING HEREFORD
SATURDAY, MARCH 21, 2026 • NOON
DUTCH VALLEY AUCTION • 1877 COUNTY ROAD A&D • PLATTEVILLE, WI 53818

TERMS AND CONDITIONS

Terms and Conditions

Good check only. Each animal is to be sold to the highest bidder. The auctioneer shall settle any dispute as to bids. All cattle are to be paid for by the purchasers during or immediately after the sale and will not be released until settlement has been made. In the case of online buyers, arrangements are to be made with the Sale Manager immediately following the sale. Each animal will be at the purchaser's risk immediately after the animal is sold. Insurance may be purchased at the time of sale.

Announcements at the sale ring by the manager or auctioneer shall take precedence over statements in the sale catalog. The owner is responsible for any statements or announcements regarding his consignments in the sale.

Health certificates will be delivered to the purchaser at time of settlement.

Registration certificates will be transferred through the AHA to the buyer at the seller's expense by the Sale Manager. Buyers should advise the clerk of the WHA of proper names and addresses in making transfer of the certificates. AI certificates will not be furnished by the seller on females carrying the service of non-owned AI sires.

Breeding Guarantee: All bulls and females are guaranteed to be breeders if given proper care. Heifers pronounced safe in calf by the veterinarian shall be considered breeders without any further guarantee. All bulls will be semen tested. A copy of the semen test will accompany the health papers.

All claims for adjustments must be in writing within six months of sale. Any animal returned to the seller because it does not comply with the guarantee will be at the buyer's cost of transportation. Animals of breeding age that fail to breed after a six-month trial may be returned to the seller's farm in good condition. The seller reserves the right to try said animals for six months and if it proves to be a breeder, return it to the farm of the buyer. If the animal proves to be a non-breeder, the purchase price will be refunded or another animal will be furnished at the buyer's request.

The WHA is only acting as an Agent for the sale and is not responsible for any disputes between the buyer and seller.

Liability: All persons who attend the sale do so at their own risk. Neither the management nor the WHA assume liability, legal or otherwise, for accidents which may occur.

EPDs: All EPDs reflected in the catalog are current as of January 27, 2026.

Note on Bangs Vaccination: Bangs vaccination is no longer required for most states in the U.S. However, a few may require blood testing if not vaccinated to enter the state. If that is the case, the female will need to return to the seller to be tested and trucking will need to be worked out between the buyer and seller. All females are deemed Bangs vaccinated (OCV) or not in the footnotes. Updates will be available sale day.

Please check the Wisconsin Hereford Association's website at wisconsinherefords.org for updates as they become available.

WHA FEMALE GRANT PROGRAM

The purpose of the grants is to assist WJHA youth members in purchasing a Hereford female to start building their own herd. The grants are funded by the Wisconsin Hereford Association, and the consignors of the Wisconsin Hereford Association Spring Sale. Of the two grants, the consignor-sponsored grant can be used only at the Wisconsin Spring Sale. The WHA-sponsored grant may be used to purchase a Hereford female from any WHA member in good standing, and may be used at any date before December 31. Two additional grants are available from the WHA in 2026, sponsored through memorial donations by the family and friends of Gary Reinke. Gary was a long-time member of the Wisconsin Hereford Association and very supportive of Youth Programs.

For more information on the WHA Female Grant Program, please contact Kelly Oleson, at oleson.kelly@gmail.com or 608-547-8101.

TWO WJHA MEMBERS WERE NAMED AS 2025 WINNERS FOR THE WHA FEMALE GRANT PROGRAM:

Vincent Wetenkamp received the \$500 grant sponsored by the Wisconsin Hereford Association. Vincent purchased Lot 35 at the 2025 WHA Spring Sale, PAW 601D JEWEL 415, consigned by PAW Livestock, LLC, Pleasantville, Iowa.

Chloe Wynn received the \$500 grant sponsored by the Consignors of the Wisconsin Hereford Association Spring Sale. Chloe purchased Lot 25, FCCH DIRECTION MILLIE, consigned by Crooked Creek Herefords, Wonewoc, Wis., at the 2025 WHA Spring Sale.

The Wisconsin Hereford Association congratulates Vincent and Chloe on their heifer purchases to build their own Hereford Herd!

Past WHA Female Grant Program Winners:

2024: Sloan Averbeck, Mya Bevan

2023: Heidi Maahs, Lily Mitchell

2022: Landen Knuth

DONATION HEIFER

9th Annual Junior Donation Heifer

This year will feature a special Lot 1. All proceeds will go directly to the Wisconsin Junior Hereford Association. We would like to thank Bergman Farms of Augusta, Wis., for their gracious donation.

We are honored to donate 911G Bergman Farms 24N, Navajo, to the WJHA. The organization has done so much for the youth of Wisconsin and the Hereford breed. We wanted to keep the tradition going for the youth & support locally. 24N Navajo is an amazing heifer. She is small fronted, long necked and big bellied. She moves like a cat. She is very gentle and she has great hair. She will make a great show heifer and an even better cow. Polled, OCV, fully vaccinated.

Consigned by: Bergman Farms, Augusta, WI

Selling Lottery Style

The final amount bid will denote the amount of the bidder's donation.

Example Round 1 – Final bid is \$300 to John Doe. John Doe will get 30 chances on the final drawing (each ticket represents one chance). At the end of the auction, one ticket per \$10 donated will be put into the drawing and the winner will be drawn and awarded the heifer.

Please contact B.J. Jones for more information or questions.

Due to mid-February, we are offering a pregnancy by the 2025 National Western Champion Polled Bull, Stellpflug Gunsmoke 222, out of proven donor cow from JDH Delaney Herefords, JDH MS 21Z Victor 3Y 11B. She is the mother and grandmother of proven sires such as JDH Stud 63E, JDH Benton 86, JDH AH Prominent 21G, JDH AH Standout 16 G. Her natural calf this year was 2025 Reserve Calf Champion at the Wisconsin State Fair and World Beef expo. This is an excellent opportunity to tap into some proven genetics. The recip is a registered Hereford cow with an outstanding pedigree of her own, that is show broke and a great mother. We are proud to offer these two individuals. She has an outstanding bull calf at her side. Video available of the pair.

We are proud and excited to offer this fall HEIFER calf pregnancy. 1704 is a cow we are building our program around. She catches every visitor's eye instantly. A couple years ago she had a natural calf sired by Liberty that every visitor noticed and admired, so we decided to flush her back the same way. She has clicked with just about everything she has been mated to and we feel this will be no different. Bulls have done well at nationally recognized bull test stations, and her daughters have been top producers for us that continue to get better with age. 1704 is sired by Jensen's Pioneer bull from a few years back that was a flushmate to Perez's Sheila donor that was a crowd favorite and champion at both NWSS and Canada's Agribition. 1704 offers tons of mass and shape while still having look and elegance about her. She is perfect uddered and low maintenance. We will have many calves out of this mating this spring. Expect these to be soft middled, easy doing cattle that will have do-ability and still maternal enough to raise the next generation exceptionally down the road. We wanted to offer a fall pregnancy because it offers a junior exhibitor the chance to show it 2 years if they wish. Note: Recip cow will not be onsite sale day, we will coordinate shipping arrangements following the sale. Recip cow is a 5-year-old solid black commercial cow that is good tempered. Due 09/13/2026. 1/2 payment due sale day, 1/2 payment due once recip cow is delivered.

The Donor Dam 1027 "Scout" was Division Champion or Reserve Division Champion at 5 National Hereford Shows (JNHE, OKC Cattlemen's Congress, National Western Stock Show) in her 2022-2023 show career. Scout completed her show career as the Champion Hereford female at the 2023 Wisconsin State Fair Junior show. The service sire HL Stimulus 2108 ET has sired Champions at all levels. Stimulus complements his elite phenotype with strong Carcass EPDs.

Selling three (3) embryos will guarantee one (1) pregnancy.

We are campaigning a full sib bull PRR Sinister N181 ET this year and when you see him you will understand why we needed to recreate more of this mating. Conair was a 5-time National Division Champion, along with siring a Div Champ Pen of Bulls and Res. Div. Champ Pen of Heifers in OKC 2025. Conair semen is not available on the open market. Stormara has proven herself as a super donor and dam of many champions.

We will guarantee 1 (one) 90-day pregnancy if implanted within 1 year by a certified embryologist. Embryos are stored at Boviteq, Madison, WI. Shipping available at buyers' expense. For more information visit our website at www.plumriverranch.com, follow us on Facebook, or contact Eric.

The donor of this mating, Sequin (Marksman x Stormara), is a maternal sister to Sinister, as well as several other high quality champion offspring. The sire of this mating is Final Chapter who was crowned Champion Bull at NAILE and is now owned by GKB with semen valued at \$250/unit. The recip of this embryo is a registered Hereford heifer that unfortunately came into heat on a day that I could not breed her, so she got an embryo. Due approximately 10/05/2026. A very nice Copper Candi daughter that is calm and halter broke. Our loss, your gain on a very nice genetic package.

03M Molly is homozygous polled, OCV, and fully vaccinated.

03M Molly is going to be a great broody cow. She has great disposition. We decided to try some old school genetics on a few cows in 2023 and 03M Molly is the result of this gene pool.

Her sire, the popular KT Built Tough 1010 bull has produced some of the greatest maternal cows in the breed, and 03M Molly demonstrates those traits perfectly.

Bull calf born on 1/10/25, sired by Huth J014 Distinctive M008.

Prairie L21 is a quiet, google-eyed dark cherry red heifer. She is Greg's pick of the herd and is the granddaughter of our NJW donor cow.

Her dam is still producing at the age of 13 and her grandam produced to 17. We have several daughters in production.

Her sire, Playboy is out of Plum River Ranch's donor Kisses and sired the Champion Hereford steer at the WI State Fair for the Smiths.

Bred AI on June 18, 2025 to NJW 160B 028X Historic 81E ET and due March 27, 2026. Retaining the right to 2 future flushes at the buyers convenience. Homozygous Polled.

Pris 34M ET is a very unique "old soul." Frozen for 20 years as an ET, this bred heifer goes back more than 54 years, in just 3 generations, with all donor dams, and the result of several years of delayed embryo transplants. You will be hard pressed to find any current pedigree with the likes of Glenkirk, ACE, and Dunwalke in them.

Bred AI on July 12, 2025 to H FHF Authority 6026 ET and is confirmed due on April 23, 2026. Follow us on Facebook or visit our website www.plumriverranch.com for updated pictures and videos.

M15 is a 3/4 sib to the high selling lot in the 2023 WHA sale. I'm committed to offering my best and I believe this is it.

M15 is a homozygous polled female that is so smooth and angular in her design. She offers so much shape and dimension when you step in behind her while still remaining fresh and feminine. I have full confidence in her as a brood cow with many half sisters working for me right now.

She really offers a nice EPD profile being in the top 10% of the breed in 4 different traits including UDDR, TEAT and CHB.

As an added bonus, she is bred to Huth LHF Badger K021 for an April 29 calf that is believed to be a heifer. Don't miss out on an opportunity like this right now.

M24 puts together a lot of interesting pieces in a powerful package. Attractive through her front third, but still being wide made in her construction with a bold sweep to her rib cage.

This homozygous polled female offers a balanced set of EPDs with growth numbers in the upper 20% of the breed.

Her sire is a Pyramid Influence son that we purchased from Doug Lind. We have really liked the daughters we have and can't wait to see them in production.

Bred to Huth LHF Badger K021 and called safe with a heifer calf due May 12, 2026. Both heifers sell.

Her mother F46 is a very good Trust 100W daughter that has always done a good job.

Bred on 02/05/2026 and will be confirmed by sale day. She will be bred to our Final Print son who is out of Pete Atkins' 19Z cow. This package is about as good as it gets.

Lot 32, HHF MS Printer L18 E30 N66, is also a daughter of the bull this heifer will be bred to.

Talk about a female to get excited about! This heifer is a deep-bodied, feminine female with plenty of eye appeal. She is structurally correct on a sound set of feet and legs, travels freely and maintains her condition with ease.

This heifer comes from a productive, dependable cow family and shows the kind of balance and quality that will work well in a variety of programs. A great opportunity for anyone looking to add a functional, attractive female to their herd.

Polled and Bangs Vaccinated.

Sells open.

With outstanding maternal strength, Pearl Jam will be a valuable addition to any cow herd. She offers a proven, problem-free pedigree highlighted with low birth weight and strong milk EPDs. Pearl Jam is quiet, halter broke, and easy-going, making her a pleasure to work with.

Her sire, NJW Ridge 254G, was used extensively at NJW Polled Herefords on both cows and heifers, with numerous progeny featured in their sales.

Take her home with confidence—she's the kind that won't disappoint. She is polled and bangs vaccinated.

Sells open.

We think this little girl will fit in well anywhere. She is a complete package – nice feet, sweet head, thick bodied, gentle disposition. She gets up and moves well.

Her dam served us well with good calves. Her sire gave us thick well bodied calves.

She is horned (they were removed).

Give her an extra look.

Cinnamon is the second natural calf out of our donor cow from Wildcat. She's only being offered because her mother froze 19 reverse sort embryos this past spring.

N01 is a polled female that screams brood cow, moderate in her build but offers a tremendous amount of power when you study her down her top and from behind.

If she's anything like her mother, she's going to have a picture perfect udder once in production.

Good doing practical females that have been the base of Crooked Creek Herefords for the last 50 years.

This female exemplifies this trait perfectly, deep sided, big ribbed, square footed and good built. Her extra shot of look and genetic relevance are what we are after to push the next generation of cattle and cattlemen to be better.

Bid with confidence on a female that will never put you out of business.

Nestle 83N is a fancy Perks Hero daughter out of a very productive Tank daughter from a great longevity cow family.

You won't miss this long, straight topped heifer with an attractive goggle eye and smooth front end. This heifer's balanced EPDs and act. BW of 84 lbs., make her a breeding tool for progressive Hereford programs.

Polled. OCV.

Nova 87N is a stout, bold ribbed, deep bodied female with an excellent feminine front end that makes her a great show prospect.

She is a high performance heifer backed by a 107 Yearling Weight EPD, but with only an 89 lb. actual birth weight.

The Perks Hero daughters are rapidly becoming the sought after type heifers for building future Hereford herds. Polled. OCV. Both heifers sell.

This pretty marked heifer was incredibly green when she was pictured. She has since continued to grow and bloom.

She has a good disposition, giving you the option to show her or add her to your cow herd.

She is horned, sells open.

Oleson Family Farm is proud to be consigning this dark red March polled heifer out of one of the most prominent Hereford bulls in recent years, Marksman.

Her dam, KJ 364C Salsa Special 364J ET was quite profitable during her time at C&L Hereford Ranch and Jensen Ranch. A heifer we had trouble letting go knowing the kind of return investment someone could make on her!

This heifer is sound, stout, deep bodied and flashy enough to be successful in the show ring while also having the maternal capabilities to be a profitable cow.

This is one we appreciate for how she is on the move and on the stand still.

Show heifer with EPDs to boot!

Not only is she top 3% in CHB, WW, and YW while charting above breed average across the \$ indexes but folks she will show and she WILL compete.

Big bodied, feminine, awesome built, and the temperament that will give an exhibitor of any age a new best friend.

If you've looked for a heifer this year you've heard that the Jr National is back in Madison in July and we truly believe that this representative of our program is one that could make for a fun summer.

Homozygous Polled.

Phoebe is a dark cherry red, google-eyed heifer.

She is a deep bodied heifer out of a great producing 3-year old with an excellent udder.

She is sired by PRR Playboy out of Plum River Ranch's Kisses cow. We are retaining her full sister.

Phoebe will make an excellent addition to your herd.

Retaining the right to two (2) future flushes at the buyers convenience.

OCV.

557N comes from a past state sale purchase that we could not be happier with. She is a Fresh Prince son backed by a full sister to Copper Candi from Pierce Hereford Haven we purchased a few years ago. Well balanced set of EPDs combined with a cool look we all want.

Her mother is a moderate built perfect udder cow that with her first calf raised an awesome bull that sold in the state sale last year.

Take her home and run her in the May division then let her make you money as a great cow prospect.

This Desperado May heifer is an outstanding show prospect with a gentle disposition, excellent depth of body, ample bone, and a clean, feminine front end.

Her strong EPD profile positions her to become a highly productive brood cow and a valuable addition to any herd.

Bunny is heavily pigmented and out of a first calf heifer that was shown by Max Klussendorf from Medford, WI who had a very successful show career herself.

She is polled, bangs vaccinated and sells open. Both heifers sell.

Beautiful polled show heifer prospect here!

We purchased this one's grandam from Wildcat Cattle Company and have had many successes with her daughters and granddaughters. 12N's sire comes from a successful line of the Jensen Brothers' genetics.

If you want to be competitive in that summer division she's got the look, build, and body shape that won't disappoint!

Wildcat Salvo 513 is a horned fall-born heifer calf by the popular ECR Copper Candi 1333ET and out of Purple HB Sawyer 44K, one of our most outstanding young cows.

Her dam is an exciting, up-and-coming female known for her excellent udder quality, offering the kind of maternal strength, longevity, and production value we strive to build into every generation.

We love the build, style and look this calf brings to the table and believe she has the pieces to be an excellent show heifer, with the potential to compete at the Junior National in Madison this summer.

Updated pictures and video will be available at www.wildcatcattle.com closer to the sale date.

Sire is CHB sire of Distinction. Dam is Vanguard daughter with beautiful udder.

Fabulous EPDs with 12 traits in top 10% with big spread between BW and WW.

Actual BW 78 lbs. Adj. 205 day WW ratio 113.

Deep red with red neck and eye pigment. Very pleasing phenotype. Polled with flat thumbnail sized scurs.

See video at mgmpolledherefords.com.

This Smoke Stack son is a stud, with a royal pedigree from top to bottom. His Trust dam is one of our best cows, producing excellent offspring each year.

Winner ranks in the top 10% for CE, BW, and Marb; top 5% for teat and udder.

He is wide, thick, attractive and sound. He will work in any program from show to commercial.

Homozygous polled, plus MD and DB free.

Check FB page "JonDor Herefords" for additional information.

Sire, Vanguard, was in top 5 carcass bulls in the 2024 NSRP. Two Vanguard sons are in the top 5 carcass and feed divisions in the 2025 NSRP. Dam has been flushed extensively with 13 females in the MGM and Slayton herds. Full brother to high selling bull at the 2023 Iowa Beef Expo. Homozygous polled. BW 79 lbs.

Eight traits in top 10% with superb maternal and carcass traits with SCF, MCE, udder, and teat in top 2 to 6%. Marbling, REA, and CHB in the top 1 - 2%. BMI is in the top 1%.

Visit mgmpolledherefords.com for video of 27M and picture of dam.

Homozygous polled.

Madden is like his sire in so many ways, dark red, full body pigmentation, including double eye shadow, free of all known defects, solid, and wide based, with an extremely desirable EPD profile and a great spread of -0.4 BW to 101 YW.

If you are needing a more mature bull for heavy service, you will be hard pressed to find one better than Madden.

Pictures and videos will be posted on our website at www.plumriverranch.com or follow us on Facebook.

This 33Z son out of a Belle Air daughter, who has been consistent with producing stout progeny, is a phenotypical freak.

He has all the pieces for a herd sire.

Moderate frame with lots of muscle and growth.

Bergman Farms 13N Nitro is a beautiful deep red cherry-colored bull.

He has great disposition and excellent demeanor.

Pollled and fully vaccinated.

Deep-chested with plenty of rib, big-footed and has great length in his body.

13N Nitro would be a great breeding asset for any herd, whether you have a commercial or registered herd, he's your sire!

Calving ease herd sire look in here!

Paxton is the inaugural prodigy of the hot new donor here in Wonewoc. A big hipped thick made bull that's packed full of muscle and product.

Built right at the ground to make daughters that will last in production while still top in carcass traits to make cattle that will hang profitable! Not to mention low birth and calving ease to help reduce stress come calving!

We're awfully high on this sire and believe he can take any program to the next level!

Renegade is a bull we feel puts a ton of useful qualities together extremely well; homozygous polled, excellent EPDs, pigment, tons of mass, tons of performance and is backed by a pedigree that will add incredible value to not only the purebred producer but the commercial producer as well.

He is big bodied, wide topped and stands on a good foot while continuing to be flexible and sound. His pedigree is littered with highly maternal genetics that have longevity, do-ability and functionality. On the top side, Liberty is widely known for producing top quality seedstock that have been widely accepted by all aspects of the breed. On the bottom side, his dam is an ideal beef cow. She breeds back 1st service every year, calves unassisted and weans a heavy calf every year. His grandam has raised 11 calves (10 AI sired) at 12 years old and still going strong.

I cannot say enough about this cow family. If we didn't have so many maternal sibs to his dam, Liberty daughters and plan to flush his mother in the future, we would be keeping him ourselves.

We feel he is the most exciting animal we have ever raised regardless of sex. This is a bull that will move the needle for even the most progressive breeding programs. We are all in on this bull.

Scurred.

DNA tested and is defect free.

This bull has a neat look. He's up headed and square hipped. He carries himself on a great set of feet and legs. He has a large scrotal and good maternal EPDs. His dam traces back to the BR Belle Air 6011. She's a small, easy keeping cow with a beautiful little udder. Feel free to reach out with any questions.

How often do you have the opportunity to own a direct son of the great 45C cow. Let alone a full sib to a \$50K heifer sold by the Jensen family of KS. A full sib brother and sister are also being used extensively by the Jensen family. These genetics speak for themselves.

He may be young, but think of the ROI on this young sire. Homozygous polled by pedigree with an EPD chart that can be utilized by any progressive breeder.

He has 3 traits in the top 1% of the breed including his CHB numbers. And when you are done looking at him on paper, there is truly a lot to appreciate about this bull. Bold construction that is still built right from the ground up.

This is a chance you can't afford to miss.

Understanding Hereford EPDs

The American Hereford Association (AHA) currently produces expected progeny differences (EPDs) for 17 traits and calculates three profit (\$) indexes. AHA's genetic evaluation makes use of a Marker Effects Model that allows the calculation of EPDs by incorporating the pedigree, phenotypic and genomic profile of an animal. Animals that have a genomic profile will be denoted with a GE-EPD logo.

The current suite of Hereford EPDs and \$ indexes includes:

Calving Ease — Direct (CE)

CE EPD is based on calving ease scores and birth weights and is measured on a percentage. CE EPD indicates the influence of the sire on calving ease in females calving at 2 years of age. For example, if sire A has a CE EPD of 6 and sire B has a CE EPD of -2, then you would expect on average if comparably mated, sire A's calves would be born with an 8% more likely chance of being unassisted when compared to sire B's calves.

Birth Weight (BW)

BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD.

Weaning Weight (WW)

WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of 60 and sire B has a WW EPD of 40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lb. heavier at weaning when compared to sire B's calves.

Yearling Weight (YW)

YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

Dry Matter Intake (DMI)

The Dry Matter Intake EPD predicts the daily consumption of pounds of feed. For example, if sire A has a DMI EPD of 1.1 and sire B has a DMI EPD of 0.1, you would expect sire B's progeny, if comparably mated, to consume on average 1 pound of feed less per day.

Scrotal Circumference (SC)

Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality, and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty. Yearling sons of a sire with a .7 SC EPD should have yearling scrotal circumference measurements that average 0.7 centimeters (cm) larger than progeny by a bull with an EPD of 0.0 cm.

Sustained Cow Fertility (SCF)

The AHA's new Sustained Cow Fertility EPD (SCF) is a prediction of a cow's ability to continue to calve from three years of age through twelve years of age, given she calved as a two-year-old. The EPD is expressed as a deviation in the proportion of the ten-possible calving's to twelve years old expressed as a probability. For example, the daughters of a bull with a 30 EPD would have the genetic potential to have one more calf by age twelve than the daughters from a bull with a 20 EPD. In other words, the daughters from the 30 EPD bull would have a 10% greater probability of having one more calf than the bull with a 20 EPD. This is equivalent to saying that the daughters are 10% more likely to remain in the herd to age 12.

Maternal Milk (MM)

The milking ability of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

Maternal Milk & Growth (M&G)

Maternal Milk & Growth reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of daughters' progeny weaning weight. A bull with a 29 lb. M&G EPD should sire daughters with progeny weaning weights averaging 19 lb. heavier than progeny of a bull's daughters with a M&G EPD of 10 lb. (29 minus 10 = 19 lb.). It is equal to one-half the sire's weaning weight EPD, plus all of his MM EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. It is sometimes referred to as "total maternal" or "combined maternal."

Maternal Calving Ease (MCE)

MCE EPD predicts how easily a sire's daughters will calve at 2 years of age and is measured on a percentage. For example, if sire A has a MCE EPD of 7 and sire B has a CE EPD of -3, then you would expect on average if comparably mated, sire A's daughters would calve with a 10% more likely chance of being unassisted when compared to sire B's daughters.

Mature Cow Weight (MCW)

The MCW EPD was designed to help breeders select sires that will either increase or decrease mature size of cows in the herd. The trait was developed after years of cow weight data collection and the EPD relates directly to the maintenance requirements of a cow herd. For example, if sire A has a MCW EPD of 100 and sire B has an EPD of 85, then you would expect the females of sire A, if mated to similar cows, to be 15 lb. heavier at mature size.

Udder Suspension (UDDR)

UDDR EPDs are reported on a 9 (very tight) to 1 (very pendulous) scoring scale. Differences in sire EPDs predict the

difference expected in the sires' daughters' udder characteristics when managed in the same environment. For example, if sire A has a UDDR EPD of 0.4, and sire B has a UDDR EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score better udder suspension in daughters of sire A, compared to sire B.

Teat Size (TEAT)

TEAT EPDs are reported on a 9 (very small) to 1 (very large, balloon shaped) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment. For example, if sire A has a teat size EPD of 0.4, and sire B has a teat size EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score smaller teat size in daughters of sire A, compared to sire B.

Carcass Weight (CW)

Carcass weight is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight. For example, if sire A has a CW EPD of 84 and sire B has a CW EPD 64, then you would expect the progeny of sire A, if harvested at the same age constant endpoint, to have a 20-lb. advantage in terms of hot carcass weight.

Rib Fat (FAT)

The FAT EPD reflects differences in adjusted 365-day, 12th-rib fat thickness based on carcass measurements of harvested cattle. Sires with low or negative FAT EPDs are expected to produce leaner progeny than sires with higher EPDs. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Ribeye Area (REA)

REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Marbling (MARB)

MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, [IMF]) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Baldie Maternal Index (BMI\$)

The Baldy Maternal Index is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

Brahman Influence Index (BII\$)

The Brahman Influence Index is a maternally focused index that is based on a production system that uses Brahman x Hereford cross cows. Progeny of these cows are directed towards a commodity beef market since Certified Hereford Beef does not accept Brahman influenced cattle. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability in finishing non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep harvested progeny successful for a variety of commodity based programs. This index targets producers that use Hereford bulls on Brahman influenced cows.

Certified Hereford Beef Index (CHB\$)

The Certified Hereford Beef Index is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows and all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight to ensure profit on the rail. As well there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. Keep in mind, this production system takes advantage of complimentary breeding with the commercial Angus cow. Although Marbling is weighted positively in this index, a positive weighting for Rib-eye Area and a negative weighting for Back Fat are a greater priority in this index to allow for optimum end-product merit. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.
