

125 years of the anchor T brand ...

P&R Herefords LLC

10th PRODUCTION SALE

Monday, November 3, 2025 – 1 p.m. (CT) – Trail, Oklahoma

125 years of Western Oklahoma ranching tradition of the Craig and Laubach families!

Welcome to P&R Herefords 10th Production Sale!

Welcome to this year's sale. Boy does time fly bye!

It is kind of hard to soak in the fact that this is our 10th sale. We are so thankful that the Lord has blessed us this year with record high cattle prices and an abundance of moisture and grass.

This year's sale is dedicated to Ross and I's great grandfather, Timothy Craig. T Craig founded our family's ranch 125 years ago and we are proud and humbled to still be using his anchor T brand well over a century later.

We don't give remembrance enough to our pioneer ancestors that braved the unsettled open prairie to raise their families and start what is now America's beef industry.

T Craig would be proud to know that his granddaughter and her sons are still raising Hereford cattle, and he wouldn't be upset that we cross them with Angus cattle considering his Scottish ancestry. So please note his great great grandson's small Angus offering in the sale.

The Hereford Advantage is real. One of our long time customers told me a story this spring that proves it. This customer has two sons and they both run Red Angus cows, and decided to have a little brotherly competition. The one brother bred his best Red Angus bulls to his cows, the other used P&R and Graft-Britton Hereford bulls on his cows. The result? The Baldy calves out weaned the straight breeds by 75 lbs. per head! Take 75 times \$4 and you get \$300 per head. Any questions?

Folks this wasn't some breed association or college research test; this was a real world apples to apples comparison and the results are just too powerful to ignore if you care about the profitability of your ranch!

P&R Herefords continues to be a maternal based herd that emphasizes the important traits needed for producing cattle in a limited feed environment. Our cow herd has been bred for decades to produce low birth weight, high maternal Hereford cattle, with exceptional fertility.

The P&R sale bulls were handled a bit different this year as we note later in the catalog.

We sincerely care about the profitability of your ranch just as much as we do our own. We want everyone using Hereford bulls and we want you to get paid for doing so.

We thank Graft-Britton Ranch for placing a couple of bulls in the sale even as Glenn has had to help Jean with her health. Ross Graft has some big shoes to fill, but we are confident that he will carry on the tradition. Hereford cattle have been a part of the Graft family for decades, and we all (AHA included) need them raising registered Herefords.

A hearty thanks to The Bank of the West, and Sheldon & Chelsie Rounds of R&R Livestock Feeds for their continued support and for providing our meal again this year.

Once again, thank you for your continued support and interest in our breeding program. We hope to see you on sale day.

*Sincerely,
Paul Laubach*

P&R HEREFORDS LLC

125 years of Western Oklahoma ranching tradition of the Craig and Laubach families!

P&R Herefords 10th Production Sale

With Special Guest Consignor: Graft-Britton Ranch, Leedey, Oklahoma

Monday, November 3, 2025 – Trail, Oklahoma

Absentee Bidding

If you would like to place a bid on any sale lot but will not be able to attend the sale, please feel free to contact the sellers, or any member of the sale staff. Live bidding will also be available on LiveAuctions.tv (visit them at www.liveauctions.tv).

Sale Terms and Conditions

Terms of the sale are check or cash. Every animal will be sold to the highest bidder with the auctioneer settling any bidding disputes. All cattle are the buyer's property as soon as sold and will be cared for a reasonable length of time at the buyer's cost and risk.

Guarantee

All sale cattle are, to the best of our knowledge, free of any disease or defect. Any known defects will be called at sale time, or noted in the footnotes. All cattle are guaranteed breeders. Any bred female selling is considered a breeder without further warranty. If any animal fails to breed after a trial of six months, it may be returned to the seller in good condition and in compliance with Oklahoma health regulations. The seller reserves the right to try said animal for 90 days and, if it proves to be a breeder, return it to the buyer at the buyer's expense. If the animal proves to be a non-breeder, the purchase price will either be refunded or credited

toward the purchase of an animal in the next sale at the buyer's option. No adjustments, will be made after nine months from the sale date. We assume no liability, legal or otherwise, to make any further compensation to the buyer. No other warranty or any nature is expressed or implied.

Health

Individual health papers will be provided for shipment anywhere. All bulls will be semen tested and Trich tested. Females are officially calfhood Bangs vaccinated. A licensed veterinarian will be on site sale day.

Delivery & Trucking

Delivery will be provided up to 350 miles from the sale facility on all bull purchases of \$6,000 or more. Delivery on the females will be at buyer's expense, but we will help assist with the delivery of any sale animals the best we can. All sale cattle must be paid in full before delivery with no exceptions.

Registration and Transfer

Registration certificates will be transferred to buyers upon request at seller's expense. Layton Auctions Services, LLC will transfer all animals as instructed by the buyer. In addition, seller will pay for the cost of DNA test direct to the American Hereford Association for parent verification on any calves born to females that were exposed to multiple herd sires upon request.

LiveAuctions.tv

Watch live and bid! Online bidding will be available for registered bidders through LiveAuctions.tv, visit their website at www.liveauctions.tv for more information.

Disclaimer

Any person attending this sale does so at their own risk. Neither the Sale Management, owners nor any person connected with this sale, assume any liability, legal or otherwise of whatsoever kind. Any announcements made on sale day by the owners or auctioneer will take precedence over any of the printed material contained herein.

- The top selling bull from Copeland's 2018 sale. A powerful bull with lots of mass and extra growth. Great Copeland cow families anchor this bull. 2nd generation dams, 4720 "Spot" and 4751, were two of the best "Royalty" daughters in the Copeland herd. An outcross sire for us but line-bred back to GK Genetic Explosion eight times. Daughters are very nice. One son and three daughters sell.

- Our pick from Cooper's 2022 bull sale. We had a hunch that 1205J would be a great maternal bull and his daughters are going to prove that, but the real surprise is how good this herd sire's bull calves are with tons of length and volume. Two generations of AHA designated dam of distinction (DOD) anchors 1205J's pedigree. DOD dam boasts a 105.7 weaning ratio. Four top sons and two daughters sell.

- We selected 1329J in Holden's 2023 sale for the maternal strength of his pedigree, and for a noteworthy coincidence, 1329 is Paul's Pi Chapter AGR initiation number. 1329J's dam is known as one of the top maternal cows in the Holden herd. Kent Mindermann of Apache, OK purchased the possession rights on this bull in last year's sale. One son and two daughters sell.

HH ADVANCE 1329J ET

P&R Horned Bulls

This year's sale bulls are as good a set of bulls as we have ever sold. There are several top herd bull prospects that could work in purebred or commercial herds alike. We did do something different this year. After years of Col. Layton harping on us about feeding the bulls more, we decided to send the sale bulls to a grow yard in Hereford, TX, this summer. The bulls spent 82 days on feed from the last week of May to the first week of August, gaining an average of well over 3.5 lbs. per day on a grow ration, not finishing feed. They have been on grass and fed 14% or 20% cubes since arriving home. There are six bulls (Lots 10, 17, 29, 30, 39, & 49) that we used some, so they stayed home and worked, and then we fed them like always up to sale day. We look forward to our customers telling us what they think to help us move forward on making this change a new norm or just a one opp.

- Selling Full Possession and 3/4 Semen Interest
- Elite maternal Baldy-maker. The 779E herd sire crossed on a 5110 "Tank" daughter has always been a no brainer mating. Little extra frame and stretch with elite top 1% to 2% genomic enhanced EPDs for scrotal, sustained cow fertility, milk, and Baldy-maternal index, all the fertility and maternal EPD traits that emphasize maternal efficiency and longevity.

- Selling Full Possession and 3/4 Semen Interest
- If you raise cattle in a limited feed environment, then 408 is the kind of bull that will get the cows bred and stay in shape even on short grass and sage brush. Moderate framed, extra depth of rib and capacity, naturally easy fleshing bull with calving ease and maternal power bred in. Dam is a great 7-year-old that has raised five calves with an outstanding 103 weaning ratio with her sixth calf at side maintaining a 363-day calving interval.

- ACT BW: 84 lb., ADJ. WW: 742 lb.
- Selling Full Possession and 3/4 Semen Interest
- This bull is built just like the old 454 Chevy engine. Powerful! A massive deep bodied soggy bull that just flat smashes the scales. A flush mate to the 452M bull. Genomic EPD of +109 on yearling weight ranks 454M in the top 10% of the Hereford breed and his weaning weight ranks in the top 16%. A heavier, more powerful version of the 765E x Novel flush that will be a favorite on sale day of those buyers wanting to purchase a bull that will sire a big old set of scale smashing Baldy steers.

- ACT BW: 80 lb., ADJ. WW: 698 lb.
- Terms to be announced on sale day.
- Top herd bull prospect! We feel like 458M is as good of a herd bull prospect that there is in the sale. Great phenotype, pedigree, with solid maternal EPDs. 458M has tremendous depth of rib, volume and capacity, thick, and is conservatively marked with great eye pigment. Structurally and hormonally correct for those who follow Dr. Jan Bonsma's philosophies. Double bred to 5110 with a shot of Sensation and line bred to Genetic Explosion 5 times makes for an impeccable maternal pedigree. Dam is a great producing 7-year-old cow with an impressive 108 weaning weight ratio on her first five calves (her first bull calf was a top Sensation son that sold to our vet, Dr. Jeremy Schneider, we use him A.I. on heifers), and she maintains a 364-day calving interval. Genomic EPDs rank 458M in the elite 2% of the Hereford breed for milk, scrotal circumference, and sustained cow fertility, top 10% or better for Baldy & Brahman-Maternal Index EPDs, and the top third of the breed for calving ease, birth weight, and marbling (IMF). We are keeping an interest — terms to be announced on sale day.

- A blind man should be able to find this bull on sale day, and we won't be surprised if he tops the sale. A smooth attractive herd sire prospect with great length and depth of body on a very structurally correct frame with good hormonal balance. Maternal brother (P&R Advancer 234K) out of 460M's dam of distinction mother topped our 2023 sale purchased by Webb Farms of Canton/Watonga, OK. The Cooper 1205J bull crossed with a Sensation bred female has been a good mating at P&R. Balanced set of EPDs and this bull has the maternal lineage to sire top replacement females but also has the performance to sire scale smashing feeder cattle as well.

- Top herd bull prospect! It would be hard to find a Sensation son that looks more like his sire than 467M. This top ET son of the legendary Churchill bull is a near phenotypical clone of his sire. The unique pedigree of his dam makes 467M an interesting prospect for purebred and commercial breeders alike. 467M's dam is a top donor for us that produced our top selling bull in our 2020 and 2021 sales. Top calving ease EPDs that you would expect with Sensation with a little more performance than the old man himself. Solid Hereford genetics backed by 467M's granddam that had a perfect udder and was a daughter of the legendary GK Genetic Explosion. Top 1% of the breed for teat size EPD. We will collect semen on 467M.

• ACT BW: 68 lb., ADJ. WW: 788 lb.

• Selling Fall Possession and 1/2 Semen Interest

• The ultimate in Stealth genetics. Long, deep, and thick on a structurally sound, hormonally correct frame with eye pigment and the right stuff under the hood. A top polled herd sire prospect line bred back to our anchor horned herd sire CL 1 Domino 5110R four times, the legendary horned GK Genetic Explosion 12 times, with a splash of the ultra-efficient Alan Hartwig bred 1040 polled cow (still producing at 14 years of age). 4004M's dam is a top P&R polled AHA designated dam of distinction with a whopping 110 weaning ratio, maintaining a 364-day calving interval on her first five calves. Elite calving ease genetics ranking in the top 3% of the breed for CE, BW, and MCE EPDs. Top 1% for milk, top 15% for TEAT. Top 8% for sustained cow fertility and the pedigree backs up the computer on fertility. No gene editing needed here, proof that you can trust in God versus trying to play God. Raptor and his soon to be weaned full little brother will be the true foundation for the future of our growing polled herd. We are keeping spring possession and 1/2 semen interest.

**CL 1 Domino 5110R — Maternal legend
line bred into Raptor's pedigree four times.**

P&R F22 Raptor L 4004M as a nursing calf.

Lots 40 thru 44 are all polled bulls that were purchased as calves from the Huth Herefords dispersal sale held in Wisconsin last fall, all sons of HB Distinct. We visited the Huth herd after our trip to the AHA Annual Meeting in Kansas City. We decided to purchase a few females and these quality bulls to offer some of the long time and reputable Huth polled genetics to our customers here in Oklahoma.

- Selling Full Possession and 3/4 Semen Interest
- This powerful Angus bull bred by Alex Laubach is named appropriately as Alex's cattle are part of our family legacy. As stout as an Angus bull as you could make as the natural son of Alex's foundation 13-year-old Angus cow and Final Answer daughter Alex Lady 202. Legendary LD Capitalist 316 is the grandsire, and the entire pedigree of Legacy is a who's who of the Angus genome. Genomic EPDs show a great spread from a +1.2 birth weight to a +109 yearling weight and this bull is bred maternal with a milk EPD ranking in the top 15% of the Angus breed. 304L should sire high quality replacement females or scale smashing feeder steers. Alex is keeping a full 1/4 semen interest, but it may be a while before he gets to use him a lot as most of his females are out his 202 cow.

- *Selling Fall Possession and 1/2 Semen Interest*
- *411M is a rare genetic gem as an own son of the legendary EXT Angus bull. Alex purchased sexed heifer IVF embryos from Coleman Angus of Charlo, MT, and 3 out of 4 calves were indeed heifers, but 411M was a bull and boy what a bull! Hard to believe genetics this old can still look this good as this is a stout well balanced angus bull and anyone that knows anything knows how maternal EXT cattle are, and what they did for the Angus breed. Alex is keeping spring possession and 1/2 semen rights in this great Angus herd sire prospect.*

LOT
51
PICK

Pick of the 2025 Heifer Calves

Buyer is purchasing the right to select any heifer calf from P&R's registered Hereford herds (horned or polled) 2025 heifer crop. P&R has registered 53 (44 horned & 9 polled) 2025 born heifer calves with the American Hereford Association. There will be 25 horned heifer calves on display on sale day that were weaned early from the horned mature cows, but any of the calves can be viewed at any time on the cow, or the buyer has until Mar. 15, 2026, to make their selection of which heifer they want. So, the buyer can pick a heifer calf this fall and take them home, or they can defer until early spring before breeding season and pick which heifer they like. We started this lot last year and thank David Burns and Burns Farms of Tennessee for purchasing the first ever pick for \$8000, and they selected a heifer with genetics familiar to them out of the super cow BF Novel 5502 ET. P&R Herefords has bred for high fertility, low birth weight, high maternal cattle, for over three decades now and this is an opportunity for anyone who wants to add a high maternal Hereford female to their herd that has donor cow potential. We hope to continue this tradition moving forward and give our customers an opportunity to select their pick of our very best female every year in the P&R sale.

P&R Sale Bred Heifers

We feel like this year's offering of registered bred heifers is as good of a set as we have ever offered. To put these 2024 females in perspective, consider the following. Out of 54 heifer calves, 1 was selected by Burns Farms of Tennessee from last year's pick of the heifer calves, we retained 21 head for our replacements, we are offering these 18 heifers in the sale, and we sold 14 head as commercial replacement heifers. The lot 52 heifer was purchased by Flying S Herefords of Texas, and we are offering her as a feature bred heifer lot. All of the heifers were called bred by Dr. Schneider on Jul. 3, 2025, and we have listed their approximate due date and all are bred to one of the reference sires listed on page 20, with exception to Lot 52 who is safe in calf to CL 1 Domino 4151M ET, a flush mate to Cooper's 2025 top selling bull.

HEIFERS

Angus Commercial Bred Heifer Lots

417, 418, 421

- These three commercial Angus bred heifers are from Alex's registered herd but were not registered. They are very uniform in kind and are a set of nice moderate framed Angus heifers with lots of volume and capacity and a good maternal look. All were checked safe on 7/3/2025 by Dr. Schneider to calve in February of 2026 to one of the listed reference sires listed on page 20. All three heifers sell as one set so buyer will pay the final auction price times three.

- Selling buyer's choice of either 4 conventional embryos of BF Novel 5502 ET x P&R Advancer L 765E or 4 conventional embryos of BF Novel 5502 ET x SR Expedition 619G ET. Guaranteeing 1 pregnancy if implanted by a certified embryologist.
- A rare opportunity to acquire conventional frozen embryos out of one of the most fertile horned cows in the Hereford breed, BF Novel 5502 ET. Thanks to Col. Dustin Layton and our native Tennessee friend David Burns we were fortunate to purchase 1/2 interest of Novel when she was a heifer. She has produced many great cattle and sale toppers for Burns Farms and we have some top daughters and will have more progeny in the future out of this great cow. Novel is a deep ribbed powerful cow with balanced EPDs. The mating to our P&R 765E herd sire will cross breed leading calving ease and the exceptional volume and easy fleshing ability of 765E with the power of Novel. The mating of SR Expedition 619G will cross the exceptional genomic EPD profile of the popular Stuber bred polled sire times the power of Novel. Either way the buyer picks, they will be a winner on these two exciting matings.

BF Novel 5502 ET

P&R Advancer L 765E

SR Expedition 619G ET

ADD VALUE

WITH FEEDER CATTLE & REPLACEMENT FEMALE PROGRAMS

HEREFORD ADVANTAGE

An industry-changing feeder cattle marketing program through IMI Global to verify and add value to Hereford-influenced feeder cattle with superior genetics, health and management.

MATERNAL ADVANTAGE

A unique marketing program designed to add value to Hereford-sired commercial replacement females with added fertility, feed efficiency, profitability and docility.

PREMIUM RED BALDY

Take advantage of hybrid vigor by maximizing the best traits of Hereford and Red Angus genetics that provide commercial producers with premium replacement females.

EPDs and Genetic Information by Paul Laubach

P&R Herefords has long been an American Hereford Association (AHA) Total Performance Records (TPR) member and has utilized EPDs, both conventional and genomic enhanced (GE-EPDs), and we have done extensive DNA testing on our herd. We believe in records keeping, technology, and DNA testing but we want our customers to know what we have learned about all the above over the years.

First of all EPDs are a tool to help us but and at the end of the day you don't want to be using them exclusively to make your genetic selections because the accuracy of them is not very high just like your local weather man. Very few bulls are widely used enough to reach even 90% or higher accuracy (would take 1000s of progeny), and even if they do that doesn't mean you bet the farm on these computer algorithm generated numbers. Genomics through DNA testing can identify genetic markers of individual animals that help identify certain traits yet they too are not very accurate if you are trying to make breeding decisions.

Why are they not more accurate? Simple. Genetics is so complex, and at the end of the day, only God knows how everything is going to line up when you mate two animals together.

First of all, cattle have 30 pairs of chromosomes, which means every time you mate two animals together you will see during meiosis a factor of 2 to the 30th power (over 1 billion) possible combinations of how these chromosomes will line up from one parent alone. Nobody, no computer, no testing, could predict precisely which chromosomes will be passed on from one parent to their progeny, the possibilities are literally in the trillions.

Geneticist often speak about the "law of segregation" which means every parent has two alleles for every gene but they can only pass one to their offspring, and which allele is passed on is completely random, thus the possibilities are just not calculable for all practical purposes.

To illustrate my point better please note the picture of myself and my younger brother Ross. As you can easily see, my brother inherited quite a bit more height, stature, and muscle mass than me, but I am naturally more intelligent and I think all would agree that I am the better looking of the two.

Thus we recommend that our customers use EPDs more for certain trends or traits they are looking for but do not try to use the numbers as actual calculations. We use EPDs to help market cattle and breed associations like them to help generate revenue but they cannot do what some people claim they do.

The following is the current AHA breed averages (2023) on the EPDs we list in the catalog and the equivalent of how many progeny records if the EPD has been enhanced by GE EPD technology.

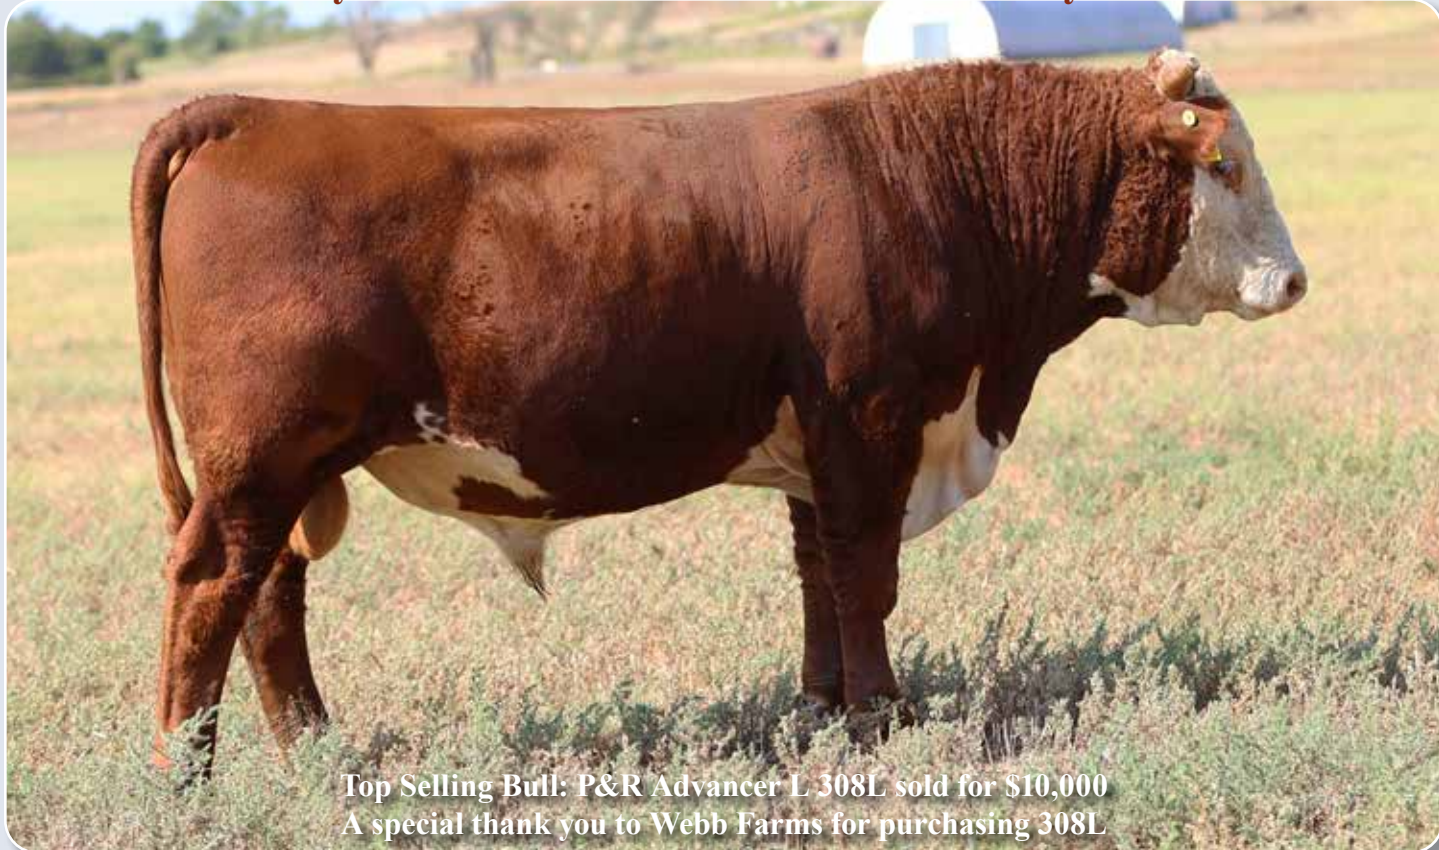

Calving Ease & Fertility: CE: 3.5 (17 hd); Birth Weight (BW): +2.6 (8 hd); Maternal Calving Ease (MCE): +1.6 (N/A); Sustained Cow Fertility (SCF): +17.3 (N/A)

Maternal & Mature Cow Weight: Milk (MM): +26 (N/A); Milk & Growth (M&G): +54 (N/A)

Mature Cow Weight (MCW) +89 (4 hd); Baldy Maternal Index (BMIS): 371

Performance & Carcass: WW: +56 (12hd); YW: +89 (9hd); Marbling (MARB/IMF): +.14 (3 hd); CHB\$: 121 (N/A)
