Dear Fellow Breeders,

It is our pleasure and honor to welcome all our friends to the annual bull sale. We believe we have a tremendous set of cattle for you this year. Our roots in the polled Hereford business date back to 1961, beginning with an FFA project for Keith. Over the years, our operation has grown from producing just one or two bulls a year to the robust program we offer today.

Our commitment to excellence is evident in our rigorous culling program, which focuses on maximizing profitability and productivity. Our cows must be efficient, heavy milkers, trouble-free, and capable of calving independently on the range. We take pride in having 30 Dams of Distinction — representing 15% of our herd — who consistently calve on time and wean large calves each year, placing us among the top herds in the Hereford breed.

We manage 200 moderate-framed, productive polled Hereford cows and 60 South Devon cows. Our program is built for ranchers, aiming to produce cattle that are profitable and adaptable. Calves are reasonably sized at birth yet grow rapidly, with bulls suitable for both heifers and cows. Performance testing ensures our cattle meet the needs of commercial producers, delivering thick, easy-keeping animals with strong maternal traits and efficient feed conversion — traits that increase weaning weights and drive profitability.

Our cattle are bred to thrive in challenging environments, efficiently utilizing available feed and excelling even during droughts. After 65 years in the industry, we are confident that our cattle will meet and exceed your expectations. Elkington cattle produce high-performing, easy-fleshing calves and cows. Our bulls are born and raised in harsh conditions on high-roughage rations at elevations between 5,500 and 7,500 feet, which helps them develop the stamina and capacity to breed longer.

We believe in natural rearing — calves that are raised by their dams, not nurse cows. Embryo-transplant calves are not part of our operation, as they do not provide the proven performance of naturally raised animals. Our business remains a family endeavor, with Brent and I, Keith, as partners, and Layne and his son Eric playing vital roles in the operation.

Thank you,
Keith Elkington

Terms:

Terms of the sale are cash or check payable during or after the sale and before cattle will be released. Cattle will not be transferred until paid in full. We do understand if you need time to pay or need financing help, contact Keith. Elkington Polled Herefords and South Devons will be retaining a full revenue sharing $\frac{1}{4}$ semen interest on all bulls, unless stated otherwise. Any semen collected will be completed prior to delivery or loading out. This does not include salvage, all salvage value is the buyers.

Sight Unseen Guarantee:

We guarantee you to be satisfied with your sight unseen purchase or we will replace the animal with one of equal value if possible, if not we will refund the purchase price.

Transportation:

Idaho Falls has a good freeway coming from Montana as well as Utah. It is also served by an airport. Delta Airlines, Allegiant Air and United serve the Idaho Falls Airport. There are cars to rent at the airport, although we would be glad to send a car to pick you up if you desire. Call 208-681-0765, 681-0768 or 208-521-1774 on your arrival. Thank you.

Liabilities:

All persons attending the sale do so at their own risk. The owners, auctioneers, management and staff assume no liabilities legal or otherwise for any accident that may occur.

Health:

The cattle are in excellent health and are run under strict health standards. All females are calf hood vaccinated for brucellosis. All sale animals will have papers to go anywhere in the U.S., on sale day. All bulls are virgin bulls unless noted otherwise. International health certificates will be done at our cost and cattle will be guaranteed to pass. Visit elkingtonpolledherefords.com for a list of vaccinations.

Traits You Can Count On at Elkingtons

Our goal is to produce cattle that are reasonably sized at birth and grow rapidly although some may be listed as heifer bulls in the catalog these bulls will work on any cows, the calves will have the performance you need regardless of birth weight. Average BW on Hereford bulls selling in this sale is 75 lb. and with most of them being out of short gestation sires with high (+CED EPDs) the calves will wean off as good as the calves that are born at 90 to 100 lb. with less complications at birth.

Heifer Bull Recommendations:

We take pride in our birth weights, and it's important to note that not all bulls suitable for heifers are specifically labeled as heifer bulls. A useful guideline we recommend is to choose a bull with a birth weight under 75 lb., an estimated progeny difference (EPD) for birth weight (BW) under 3, and a positive calving ease (CE) EPD. This combination should ensure that the bull will work well with any heifer or cow you have.

Warranties:

When the bull is sold we no longer take responsibility for death loss. Insurance will be available sale day if interested. We guarantee all animals to be breeders. All bulls have had fertility exams and are guaranteed to be fertile. If you should have a problem, please contact us and we will make it right. We do ask that you let us know within six months and that you take good care of the animal. We do reserve the right to use the bull on a healthy cow to see if she will conceive by him. If the bull does not get the cow with calf, we will replace the bull with one of equal value or credit in a future sale.

Delivery:

- Free delivery west of the Mississippi on a \$4,000 purchase of bulls. Pay half east of the Mississippi on bulls.
- Pay up to \$250 a head toward delivery on heifer purchases of \$2,500 or more nationwide.
- Pay half delivery costs on heifers \$4,000 or more nationwide.
- International cattle will be shipped to an agreeable port.

Volume Buyer Discount:

A discount of 5% will be offered if any single purchase buys 9 or more head for an average price of \$3,000 or more.

Pick Up Discount:

If you pick up your bull within three days of your purchase, we will discount \$50 per bull and \$25 per registered heifer lot. **This discount excludes commercial females. All bulls will be Trich tested and ready for transfer on sale day. No cattle will be loaded until the sale is completed.** You may bring your brand and brand your bull in our chute if you would like. (It might take some extra time sale day but we can try to accommodate.)

- This is a bull we feel will replace his sire. He has super performance with a 68 lb. birth weight. His calves are just awesome with pigment being dark and thick. Stock Broker 005C has had 50 calves born to him with a BW Ratio of 97, Weaning Ratio of 105, and yearling ratio on those calves of 102. A great heifer bull with a CE number and BW number in the top 1% of the breed. Stock Broker has spectacular carcass numbers and his bull calves have ratios on REA of 107% and marbling ratios of 125%. Stock Broker excels in making producers extra money with numbers in the top 5% of the breed in all of the indexes.
- Semen available from Elkington Polled Herefords

- 999G is the future of the Pathfinder line at Elkington Polled Herefords. He puts it all together and his calves really show it. He is athletic, his calves are small at birth and grow incredibly fast. He's a Trait Leader in five traits with a BW number of 0 and a YW of 115 he shows great spread and so do his offspring.

- We raised this bull and when we lost 419E, in mid-season, we turned Elker out. His calves are born small and grow very fast. We have been pleased with them you will like the style and longevity this bull will add to your program.

PAP test were performed by Dr. JD Poulson with the Cattle Health and Reproduction Clinic. PAP (Pulmonary Arterial Pressure) scores help cattle producers evaluate a cow's heart and lung function—critical for running cattle at higher elevations (5,000+ feet). This test predicts the risk for High Altitude Disease (HAD), also known as brisket disease, by measuring how hard the heart must work to push blood through the lungs. Lower PAP scores mean less stress on the heart and a lower risk of sudden death from heart failure. Scores above 49 mmHg are considered high risk, while 30-42 mmHg is ideal. Using PAP scores will help prevent costly losses in your operation.

Score Ranges:

- < 42 mmHg: Generally acceptable for high altitudes.
- 43-49 mmHg: Moderate risk, especially for younger cattle.
- > 49 mmHg: High risk for brisket disease.

NEW HERD SIRES/REFERENCE SIRES ON THE HEIFERS

We purchased these two bulls from Ned and Jan Ward because we felt they were the best in their offering. We bred to them heavily in our AI program.

Both bulls are sired by New Standard, an exciting herd sire that has been used extensively in the breed.

We are confident you will appreciate the quality of calves produced by these two bulls.

OUTSTANDING SET OF BRED HEIFERS

This group of heifers has been carefully selected and culled at weaning, yearling, and breeding time to ensure only the best remain. They represent exactly the kind of cattle we strive to produce: balanced, functional, and productive females with years of profitability ahead of them.

These heifers have never been pushed. They've been foraged and developed naturally, with no silage and minimal grain, primarily oats. Raised in high-altitude, open range conditions rather than irrigated pastures, they are hardy and well-adapted cattle that will continue to grow and develop for several more years.

Health Program: In the spring before breeding, they were vaccinated with Breed Back 10, 8-way, and Multimin 90. This fall, they received Dextomax injectable, Clean-Up II pour-on, 8-way, and Guardian to prevent scours in their calves. They will need one more dose of Guardian before

calving. All heifers have been pregnancy-checked and are guaranteed safe in calf.

Breeding Details: Most heifers were AI bred to our new herd sires, both sired by New Standard, a proven and widely-used bull in the breed known for producing quality offspring. These sires are:

NJW 71K 2912 Standard 24M (Reg. #44576363)

NJW 34H 2912 Standard 199M (Reg. #44576845)

Following AI breeding, half of the heifers were exposed to EPHR Elker Leader 321J from June 15, 2025, to September 20, 2025, while the other half were exposed to NJW 71K 2912 Standard 24M.

We are confident that these heifers will produce outstanding calves for their new owners, carrying on the consistent quality and performance we value in our herd.

EPHR MISS ELKER BROOKER 925M

SOUTH DEVON HEIFERS

This group of heifers has been carefully selected and culled at weaning, yearling, and breeding time to ensure only the best remain. They represent exactly the kind of cattle we strive to produce: balanced, functional, and productive females with years of profitability ahead of them.

These heifers have never been pushed. They've been foraged and developed naturally, with no silage and minimal grain, primarily oats. Raised in high-altitude, open range conditions rather than irrigated pastures, they are hardy and well-adapted cattle that will continue to grow and develop for several more years.

Health Program: In the spring before breeding, they were vaccinated with Breed Back 10, 8-way, and Multimin 90. This fall, they received Dextomax injectable, Clean-Up II pour-on, 8-way, and Guardian to prevent scours in their calves. They will need one more dose of Guardian before calving. All heifers have been pregnancy-checked and are guaranteed safe in calf.

These heifers were pasture-exposed to EBS ELKER EZCALVER 156H (217891), a top-five bull in the breed for calving ease, from May 28, 2025, to September 15, 2025.
