INNISFAIL INFLUENCE Sale

TUESDAY, DECEMBER 1, 2026

7 PM EASTERN • MADISON, GEORGIA

CCi LIVE LiveONLINE™

CATTLE OF
TOMORROW
today.

fellow CATTLEMEN,

Innisfail Farm got its start in the Hereford business over 50 years ago when Whitey Hunt made a commitment to utilize data driven decisions to be a responsible seedstock supplier. To this day, that mission remains the same. We have embraced a holistic approach to beef cattle production, identifying and balancing the traits of highest economic value to our customer. The amount of phenotypic traits we record allows us to stand behind the data that is presented to you. We continue to place an immense amount of pressure on functional longevity and eye appeal. The cattle in this listing do an incredible job of combining the cow families that thrive on Innisfail Lane, with highly progressive genomics, while still looking the part.

We believe the top end of these bulls present tremendous opportunity to likeminded producers, and we thought this format was the fairest way to offer them to the public. Along with the bull lots, we will feature one very unique and exciting 2-year-old heifer calf pair, and a small handful of some of the best ready to breed baldy females you will see this winter. We are also opening up the tank to progressive embryo and semen lots. The cattle are always available for viewing at the farm. We would like to invite everyone out on Saturday, November 28th for lunch and an open house beginning at 11 AM! New this year, December 2-7 any active bidders in this sale have first choice of our private treaty bulls. If you have any questions feel free to contact any of us about the offering!

sincerely,

WEYMAN HUNT, WHITEY HUNT AND BRECK DEBNAM

ANNOUNCEMENTS

Announcements at the sale ring by the owners or the auctioneer concerning the cattle will take precedence over statements in the sale catalog.

ONLINE BIDDING

The sale will be conducted in real time with an auctioneer starting at 7 PM EST – just like a traditional auction, except the sale venue is online. Visit www.CCI.Live and register to bid.

EPDS

The EPDs listed herein are as reported by the AHA and are from November 10, 2026 evaluation. We will not be responsible for changes in EPDs or if these cattle do not perform as indicated by their estimated EPDs.

TERMS

Cash or check. Each animal to be sold to the highest bidder. The auctioneer shall settle any disputes as to bids. All cattle are to be paid for by the purchasers during or immediately after the sale and will not be released until settlement has been made. Each animal will be at the purchaser's risk immediately after the animal is sold. *Innisfail Farm retains the right to two successful flushes on each female at seller's expense and buyer's convenience.* ***Innisfail Farm retains 1/3 semen interest on all bull lots.***

REGISTRATION

Registration certificates of the animals will be transferred to the buyer at the seller's expense once payment is received in full.

HEALTH

All cattle selling will have interstate health charts required for shipping into other sections of the U.S. All females who are old enough are officially calfhood vaccinated.

Bull DEVELOPMENT

These bulls are being developed on a high moisture forage diet. This doesn't only enhance bull longevity and athleticism, it also allows us to capture individual feed intake data on these bulls. The trap they live in is nearly a 1/2 mile long with feed on one side and water on the other. We keep them moving!

Cow MANAGEMENT

Genetic progress has allowed seedstock producers to reach maximum EPDs with huge potentials, when the environment allows for it. At Innisfail, we are more concerned with optimum figures that can be realistically realized in a basic commercial setting. The only way to accomplish this is by running our cow herd in an environment that mirrors our bull customer's. We calve our fall herd in a 45 day window, and they need to get pregnant on stockpiled fescue and minerals. The point being, if a bull's mother doesn't thrive in harmony with our geographic region- he doesn't even get a chance to be a part of this offering.

We've had real good luck with the Hereford bulls we've bought from Innisfail. They consistently bring the kind of quality genetics we're looking for, and just as importantly, they're easy-keeping cattle that fit our operation. We've been especially pleased with the replacement females we've raised out of them and have built a good, solid cow herd around those genetics. We've been able to find the kind of cattle we want at Innisfail, and the results have spoken for themselves. We appreciate doing business with them and look forward to buying many more bulls down the road."

-MEEKS BROTHERS CATTLE • KITE, GA

I have used Innisfail bulls in my operation for several breeding seasons. My first goal is to produce a good maternal cow to help grow my heard and to replace some aging cows. I have done this by crossing a red angus with a Hereford to create F1 red baldies. As the herd has grown I have ventured into retaining ownership of the steers through the feedyard. It has been pleasing to learn how well the steers have performed by achieving choice and prime grades! However, as a commercial cattleman what has been the most beneficial to me is the honest straightforward dialog I have had with the Innisfail team. They have guided and challenged me as I have grown my operation. When I go to a seed stock producer I expect to buy good genetics, but what sets Innisfail apart is the customer service and follow through."

-ROCKY RILL RANCH • ROCKY FACE, GA

I have been very satisfied with our set of Innisfail-bred females. From their docility to their maternal instincts, these cattle have gotten it done. We bred them to a SimAngus bull, and I was very impressed with the calves' weaning weights. The heifers sold as a replacement group and fetched top dollar. The steers didn't do too shabby through the barn."

-FOWLER FARMS • CARNESVILLE GA

AHA GE-EPD

Lot 1 truly balances the things we deem imperative to a high degree. His mother is the kind of female that simply works best in our environment. Moderate, bold, and dense. A great udder with ample milk flow. Eye appeal and structural correctness. She was the high seller in our 2024 female sale, bringing $27,000 for ½ interest. His genomic profile has 16/17 EPDs beating the breed mean while all three indices rank in the top 15% of the Hereford population. We are extremely happy with the Published females, particularly Textbook's full sisters. This bull brings calving ease to the table with a high degree of muscle shape, length of body, and eye appeal. We chose him as Lot 1 because we think he is an animal that can bring tremendous value to a wide variety of programs.

AHA GE-EPD

6N embodies our goal as seedstock suppliers- to bring top tier genetics to the marketplace in a package that is easy to look at, while being backed by truly productive mother cows. There are few animals in the AHA database that have this level of calving ease while being able to offer elite indices. Beyond the digits, he is a bull with a lot of look, body, and a great build. His mother sets the standard for femininity and maternal instinct. Lot 2 represents our vision of the future of the beef business. He ranked in the top 10% of yearling bulls for feed conversion on the C-Lock. 149 IMF ratio!

The Conjunctions are just an extra good kind of stock. They are cattle that have been quick to resonate with the early visitors to the bull pens. 2535 is a common sense beef bull that is built to inject performance, doability, and a more rugged build. His phenomenal structure and body shape suggests his likelihood to generate baldy females that embody the kind everyone is after. Lot 3's quiet disposition is notable.

I have loved this bull since the day he jumped off the trailer from the co-op herd. His moderation of stature in conjunction with his ability to weigh up with true muscle, mass, and substance represents the kind of cattle we are trying to make more of. 2546 possesses a unique herd bull presence. His EPD profile lends to the idea that he is a bull for the producer who asks their calf crop to do it all!

AHA GE-EPD

It is a frequent dinner table discussion in our house which one of these Thomas County sons is the best. 2548 is undoubtedly Kacie's favorite. I totally understand because his looseness of structure, balance, and body shape is undeniable. This bull is so athletic in his basic build. His genomic predictors are extremely balanced, equating to a great trio of indices! The mothers of every one of these bulls represent the top tier of females at Innisfail Farm, but Lot 5 and 6's dam is extra good if you like them angular, feminine, and very good uddered.

AHA GE-EPD

2519 is a bull that offers extra length of body, dimension, and muscle shape. He is smooth shouldered, great footed, and large scrotal. Lot 6 checks all the boxes for the cow calf producer- a solid calving ease bull with great gain that will keep mature size in check. He is in the top 45% of the population for every single trait. This is the kind of balance we are truly after. It is hard to go wrong with a sire that blends these statistics with this kind of maternal backing. His performance on the C-Lock suggests he is a feed efficiency super star!

Dam of Lot 7 • Owned by GKB Cattle

POWER BULL! Lot 7 sets the standard within the group for skeletal width, mass, and performance. Making cattle like this is the exact reason we used Thomas County. With the current value of rapid early gain, genetics like this will prove to be a wise investment. This bull's mother, 2014, is one of the better cows to ever reside at Innisfail Farm. She was one of GKB's selections in our mature cow herd dispersal. 2569 fits the mold of pounds in the right package that we believe is the future of the beef business.

The Runway x 231 mating combines the two females that do the best job of keeping the main thing the main thing. When you run the data for percent mature weight weaned and calving interval- 723e daughters and 231 are quick to come to the forefront. 2505 is a square built, moderate framed bull with lots of look and balance. The sire to Lots 8 and 9, Runway, was the lead off bull in our 2025 pen of three bulls in OKC. He sold to Skyvirtu Ranch of Alberta, Canada and we are very excited about his first calf crop.

Lots 8 and 9 are very maternally driven bulls. If your goal is to make hard working white faced cows that stick around and drive profit, then we cannot recommend these Runway x 231s enough. 2521 drives genomic markers for the traits of highest importance to the cow-calf producer as well as any. He is an athletic, soft bodied bull who is sensible in his stature. Investing in a bull like this will pay dividends as his daughters enter production.

You read that pedigree right! We reached deep in the tank and brought 4013 back into the program. Lots 10 and 11 are as good of 4013 sons as we have offered in our 9 years of marketing this sire group! 3N offers a modern genomic profile while still giving you the performance, length of body, and functional build that we have all grown accustomed to with the 4013s. Lots 10 and 11 are out of a power cow that is arguably one of the better Validated daughters in the breed.

This is a true performance bull. He has set the bar high every time these animals have run across a scale. Weyman bought a flush of 1101, the dam to Lots 10 and 11 in the inaugural GKB female sale. We are sure glad he did because these bulls have been extremely fun to watch develop, and they have a full sister that will make waves in Madison, GA in the future. If you are one of our customers who retains ownership of feeder cattle- this is a great option that combines gain and great carcass traits.

A balanced trait long bodied bull that combines performance with a tremendous maternal backing. His mother, 2018, is owned with Boyd Meyer. She is one of the most productive cows at Innisfail farm with a progeny nursing ratio of 113. This bull should infuse a calf crop with next level octane, while their sister mates should result in long lasting mother cows. A common sense beef bull with high proof genetics. His maternal sister selling as Lot 13 is proof of the kind of females he should sire.

Clayton Leavell joined our team full time this spring following two years of part time work. Clayton has become a vital part of the day to day at the ranch. Thank you, Clayton!

AHA GE-EPD

We wanted to share one female lot that truly embodies what our current vision is as seedstock suppliers. We landed on this 2 year old Confidence daughter and her Published heifer calf. 2455 is tidy uddered, moderate in stature, and long bodied. This cow has genuine body shape and density coupled with a feminine look and build. Her data set is highly progressive. Confidence set the bar at the National Reference Sire program this year, and a young daughter will prove to be a wise investment as time goes on. This one stings to see go! Individual ratios of REA-104, IMF- 109, dam posts 8 IMF@106.9

Frozen GENETICS

We have decided to open our tanks, and share hand selected frozen genetics that we are most excited about thawing this winter. On all embryo lots, we guarantee one (1) 90-day pregnancy if the embryos are transferred by a certified AETA technician into quality, properly managed beef-type recipient females.

The data speaks for itself. These cattle are easy to look at and very functional in their kind. If you want to turbo charge your carcass value, increase udder quality, while keeping calving ease and performance in check- this is a must use sire! Early daughter data has 5 daughters with 5NR@102.5.

004 was a highlight in our mature cowherd dispersal, and one that we couldn't resist not going back and flushing one more time. This cow combines freakishly good intake : gain correlation while being captivating in her look and balance. The 004 daughters in our 2 year old group are some of the best heifers we have ever calved. Night Hawk has been an extremely exciting young sire to be a part of. He is seeing use in some of the most dominant herds in the country.

A mating we have full faith in. 1837 has been a proven performance sire that adds length, pigment, and progressive data. 231K, the dam to lots 8 and 9, is one of our favorites. Moderate, big ribbed, great looking, and hard working! She represents the kind of female we try to build our program around.

There is no cow more tried and true at Innisfail Farm than 4021. She is the dam to Endorse and Energy. Her strong influence can be found in the pedigrees of many of the better cattle here. After the Dominion sons took the nation by storm last winter, we thought he was an excellent choice to mate her to. These cattle will be great for gain, pigment, and body. Their data will be in the top tier of the population, and come with added accuracy.

Commercial FEMALES

There is no stronger advocate for making an investment in a Hereford bull than the baldy female. These cattle were raised here out of purebred Hereford cows. They have been treated just like our registered replacements. Ultrasound and intake data is available upon request. They have had their prebreeding vaccinations and are ready for a CIDR or a bull! Truly as good as they come.
