**32 ELITE LINE ONE FEMALE LOTS**

*12 Open Heifers • 8 Fall Bred Heifers • 7 Fall Bred Cows & 3-in-1s • 5 Spring Cow/Calf Pairs*

**5 EMBRYO LOTS**

**Welcome to Flying S Herefords' 12th Annual Production Sale!** We're thrilled to have you with us as we present a remarkable offering of bulls and females that reflects the dedication, care, and long-term commitment we pour into every animal and every decision in our program. Our mission at Flying S Herefords is to produce elite Line One Horned Herefords that will excel in any environment and for any type of operation. Our focus is on every aspect of the Hereford breed. We believe in a long-lasting performance Line One breeding program to increase the predictability of our cattle for our customers, whether Commercial or Seedstock. Flying S Herefords focuses heavily on the maternal abilities in our breeding program. We have a strict culling program that enables us to produce and retain only the genetically superior animals. Cows are culled based on fertility, performance, soundness, disposition, and udder quality. We are active members in the Texas Hereford Association along with the American Hereford Association. We are involved with the TPR program of the American Hereford Association and are active members in the Whole Herd Reporting Program.

This year's sale comes at a time when the cattle market is experiencing strong, steady momentum. Beef demand remains robust, cattle futures and cash markets are favorable, and cow-calf producers, seedstock operators, and end users are recognizing the value of predictable margins, high-quality genetics, and efficient, productive animals. It's a dynamic market that rewards genetics, consistency, and sound management—all traits you'll find in abundance in this sale offering.

We are confident you'll find this to be the best set of bulls and females we have ever offered. Each lot has been selected and developed with an eye toward producing cattle that excel in the modern commercial environment, whether your goals are maternal longevity, carcass efficiency, pigment, thickness, performance, fleshing ability, ease of feeding, or overall feed-to-gain performance. Our bulls combine structural soundness and durable phenotype, while our females exemplify productive mothering ability and long, fertile lives in the herd. All bulls and heifers sell with performance and ultrasound data and have been DNA parentage verified, GE-EPD tested and have been tested IE Free, HY Free and Dilutor Free. All bulls have been Trich and semen tested.

Thank you for your continued trust and partnership. We value your time, your expertise, and the relationships that make these sales more than a transaction. We view them as a shared journey toward better cattle, better ranching, and better results at the barn and in the yard. *All sale cattle and the cow herd will be on display March 16th and 17th up to sale time. On Monday, March 16th, we will have drinks, snacks and a dinner in the early evening, along with cow herd tours in the afternoon. On sale day, coffee, snacks and lunch will be provided and will be catered by My Meat Is Sweet. Lunch will be served at 11:00 a.m., and the sale starts promptly at 12:00 noon.*

Thank you for taking the time and having an interest in our program. We look forward to seeing y'all sale day. If you have any questions or if we can be of any help, please feel free to call us any time. **MAGA**

# THE POWER OF GENOMICALLY ENHANCED EPDS

The American Hereford Association (AHA) has embraced the use of genomics into their genetic evaluation by launching a first of its kind single step analysis that utilizes the marker effects of specific traits. Likewise, AHA is directly estimating accuracy values rather than approximating. The direct estimation of accuracy results in a more conservative value but a more accurate value than previous methodologies. The AHA is producing the most reliable genetic evaluation that is supported by Whole Herd TPR™ and genomics, which will give prospective buyers added confidence in purchasing young and unproven animals.

Buying animals that have a genomic profile incorporated into their Expected Progeny Difference (EPD) offers many advantages that allow for quicker breed and herd improvement. To the right is a table showing the average increase in accuracy when buying a young animal with a Genomic Enhanced EPD (GE-EPD) versus an animal without a GE-EPD. Similarly, an effective progeny number increase is listed by trait that shows how many progeny equate to a genomic enhancement of a young animal (e.g. yearling). That's right, buying a young animal that has been genotyped is like having 2-17 progeny, depending on the trait. The proof gained on young, non-parent animals, through a genomic enhancement is valuable and greatly mitigates the risk and allows for more directed selection.

AHA TRAIT	ACCURACY IMPROVEMENT	EFFECTIVE PROGENY NUMBER INCREASE*
<b>CALVING EASE</b>	0.09	17
<b>BIRTH WEIGHT</b>	0.12	8
<b>WEANING WEIGHT</b>	0.14	12
<b>YEARLING WEIGHT</b>	0.16	9
<b>SCROTAL CIRCUMFERENCE</b>	0.17	6
<b>MATURE COW WEIGHT</b>	0.12	4
<b>UDDER SUSPENSION</b>	0.17	7
<b>TEAT SIZE</b>	0.17	7
<b>CARCASS WEIGHT</b>	0.11	3
<b>FAT</b>	0.08	2
<b>RIB-EYE AREA</b>	0.07	2
<b>MARBLING</b>	0.10	3

\* Effective Progeny Number Increase (EPNI)- EPNI is the difference gained for genotyped animals versus non-genotyped animals.

Each animal tested is recognized with the AHA GE-EPD logo.

## HEREFORD \$CHB ADVANTAGE

An industry-changing program from the American Hereford Association and IMI Global to verify and add value to Hereford-influenced feeder cattle

with superior genetics, health and management.

### REQUIREMENTS

Source and age verification | Genetic merit: *Minimum of 50% Hereford genetics and bull battery ranking in the top 50% of breed for \$CHB index (bull battery average)* | Two rounds of vaccinations prior to shipping: *2 doses of 7-way, 8-way or 9-way clostridial, 2 doses respiratory modified live* | BQA certification

### BENEFITS

Genetic improvement tool | *Sire EPD and profit index summary* | Added market exposure | *Free listing at HerefordMarketplace.com* | Enrollment cost \$3.25/head (verification + eID tag)

3006A was the high-selling bull in Holden's 2014 sale at \$80,000 for 1/2 interest and 1/2 possession and is an outstanding bull in every way. Long bodied, thick made, well marked and fancy, and he backs it all up with outstanding performance and ultrasound data plus great EPDs. He is backed by one of Holden's best cow families. His progeny have tremendous pigment, growth, length, depth, shape, style and eye appeal.

HH Advance 5107C was the high selling bull in Holden's 2016 sale for \$160,000 and is a maternal brother to the HH Advance 3297A herd bull. 5107C is built right from the ground up and is very conservatively marked. He sires calves that are big topped, square made, sound structured, big ribbed and phenotypically some of the best cattle we have produced. He is a powerful 215Z son that has combines an outstanding EPD profile with a flawless phenotype. His dam is the HH Miss Advance 9228W donor cow, who is a herd bull producing machine.

6250D was the heaviest bull on adj. 365-day weight that Holden has produced to date. He has tremendous length, volume and overall capacity. He has huge goggled eyes on both sides, is red to the ground, and has great testicular development. He is out of the 1126Y Holden donor that produced over \$140,000 in progeny sales in their 2016 sale and has had two flushes sell for over \$20,000 each.

7193E was the cover bull and lead off bull in Holden's 2018 sale. He is an exciting son of the \$130,000 5110C Cooper bull. The more you study this bull, the more you will like him. He is soft made, deep flanked, big bellied, extra thick, well marked and very correct in his structure. Three maternal brothers were used in Holden's herd, and a son out of a maternal sister was retained. We think a lot of this cow family and all the functional traits it brings to the table. 7193E also brings in the great 055X cow from Cooper's. He is a front pasture, all-around herd sire that is destined to be a breed improver.

- Owned with Holden Herefords and McKenney Farms.

7053E is a top-notch HH Advance 5107C son that we retained from our 2019 sale. He is a pigmented, super fronted, easy moving, big bellied herd bull that has explosive muscle expression and natural fleshing ability. To top it off, he is a powerhouse herd bull that is back by individual performance and EPDs. 7053E has oodles of volume, thickness, a square hip, huge top, maternal, growth, carcass and eye appeal to burn. His dam, HH Miss Advance 7142T, has been a top producing donor and has produced several herd bulls that are working all over the US. Her embryos sell in this sale.

8120F topped Holden's 2019 sale at \$55,000 for 1/2 interest. Look at the bone, substance and overall mass in this fantastic herd sire. 8120F is well marked, big testicled, super correct and out of a great cow. Dam is a top donor with a freckled face and red on her teats. Maternal granddam is a donor for Cooper Herefords who produced their third high selling bull in the 2018 sale. Note the exceptional carcass EPDs and CHB\$ on 8120F. He is a true beef bull that will add value to all segments of the industry.

- Owned with Holden Herefords

9076G recorded the highest IMF score at 6.33% that Holden's have had in their many years of ultrasound testing. He is a powerful performance bull with excellent pigment, big testicles and extra length of body, and he is out of a perfect uddered donor cow. He is a grandson of the HH Miss Advance 0121X donor cow that has produced so many top herd bulls and donor females.

0043H is unmatched by any other Hereford bull ever born for his combination of CED, BW, YW and Marbling EPDs. He has a fantastic phenotype, and his dam is an absolutely phenomenal young donor cow. He is well marked, deep ribbed, soft made, big testicled and extremely complete in his pattern. 0043H is a breed changer in every way!

- Owned with Holden Herefords, Coleman Herefords and Johansen Herefords
- 15 sons and 4 daughters sell

## Certified Hereford Beef

### PROGRAM SPECIFICATIONS

- Must have predominately (51%) white face
- Hereford and Hereford-British crossbred cattle
- No excessive hump - bos indicus influence
- Beef type breeding only
- No dairy breeding
- No bulls, cows or heiferettes
- Cattle may either be horned or polled

### Carcass Specifications

- USDA Choice or higher marbling
- Moderately thick or thicker muscling
- Medium or fine texture marbling
- Hot carcass weight of 1050 lbs. or less
- Less than 1" fat cover
- "A" Maturity only
- 10-16 in<sup>2</sup> ribeye area
- No dark cutters
- Less than 2" hump
- No capillary rupture

FOR MORE INFORMATION ABOUT THE  
 CERTIFIED HEREFORD BEEF BRAND SPECIFICATIONS,  
 PLEASE VISIT [HEREFORD.ORG](http://HEREFORD.ORG) OR CALL 816-842-3757

Expected progeny differences (EPDs) are statistical predictions, or estimates, of expected performance of future progeny – they are not guarantees of performance. The American Hereford Association (AHA) currently produces EPDs for 17 traits and calculates three profit (\$) indexes. AHA's genetic evaluation makes use of a Marker Effects Model that allows the calculation of EPDs by incorporating the pedigree, phenotypic and genomic profile of an animal. Animals that have a genomic profile will be denoted with a GE-EPD logo. EPDs are updated weekly by the AHA.

The EPDs and \$Indexes included in our 2026 sale catalog are as follows:

### Calving Ease Direct (CED)

CED EPD is based on calving ease scores and birth weights and is measured on a percentage. CED EPD indicates the influence of the sire on calving ease in females calving at two years of age. For example, if sire A has a CED EPD of 6 and sire B has a CED EPD of -2, then you would expect on average if comparably mated, sire A's calves would be born with an 8% more likely chance of being unassisted when compared to sire B's calves.

### Birth Weight (BW)

BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of +3.6 and sire B has a BW EPD of +0.6, then you would expect on average if comparably mated, sire A's calves would come 3 lbs. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty.

### Weaning Weight (WW)

WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of +60 and sire B has a WW EPD of +40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lbs. heavier at weaning when compared to sire B's calves.

### Yearling Weight (YW)

YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of +100 and sire B has a YW EPD of +70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lbs. heavier at a year of age when compared to sire B's calves.

### Scrotal Circumference (SC)

Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty. Yearling sons of a sire with a 0.7 SC EPD should have yearling scrotal circumference measurements that average 0.7 centimeters (cm) larger than progeny by a bull with an EPD of 0.0 cm. In the Hereford genetic analysis, a multiple-trait model was used for scrotal circumference. Weaning weight was used as a predictor variable to increase the prediction accuracy of SC EPDs. Therefore, an animal with a weaning weight EPD should also have a SC EPD.

### Maternal Milk (Milk)

The milking ability of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +30 Milk EPD should produce progeny with 205-day weights averaging 20 lbs. more (as a result of greater milk production) than daughters of a bull with a Milk EPD of +10 lbs. (30 minus 10 = 20 lbs.). This difference in weaning weight is due to total milk production during the entire lactation.

### Carcass Weight (CW)

CW EPD is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight. For example, if sire A has a CW EPD of 84 and sire B has a CW EPD of 64, then you would expect the progeny of sire A, if harvested at the same age constant endpoint, to have a 20-lb. advantage in terms of hot carcass weight.

### Breed average EPDs for 2024 and 2025 calves:

CED	BW	WW	YW	SC	MILK	CW	REA	MARB	BMI\$	BIIS	CHBS
+3.6	+2.5	+57	+90	+1.1	+27	+73	+48	+15	+377	+454	+124

### Ribeye Area (REA)

REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

### Marbling (MRB)

Marbling EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, or IMF) based on carcass measurements of harvested cattle. Breeding cattle with higher Marbling EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

### Baldy Maternal Index (BMI\$)

The BMI\$ is a **maternally focused index** that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed toward Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and ribeye area are also positively weighted to keep the harvested progeny successful for CHB. *This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.*

### Brahman Influence Index (BIIS)

The BIIS is a **maternally focused index** that is based on a production system that uses Brahman x Hereford cross cows. Progeny of these cows are directed toward a commodity beef market, since Certified Hereford Beef® does not accept Brahman-influenced cattle. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake but a positive weighting on Carcass Weight, which is anticipated to provide profitability in finishing non-replacement females and castrated males. Marbling and ribeye area are also positively weighted to keep harvested progeny successful for a variety of commodity based programs. *This index targets producers who use Hereford bulls on Brahman-influenced cows.*

### Certified Hereford Beef Index (CHBS)

This is a **terminal sire index** that is built on a production system where Hereford bulls sire calves for the CHB market. There is some pressure put on CED and then positive weight on both WW and YW. Remember that all offspring in this index are harvested, so they need to be born alive and then grow fast at all stages of life. Of course, we have much more emphasis on fat in this index, as we want the cattle to stay lean. There is also a significant weight on both REA and IMF, with more emphasis again on IMF. This index would be used by producers who have a target of producing bulls for a terminal breeding program. It could be used heavily in the Midwest, where bulls are used in rotational breeding programs to produce cattle in a retained ownership program or are simply sold to backgrounders. *This is the only index that has no emphasis on fertility. Remember that nothing is retained in the herd.*

For more information, log on to [www.hereford.org](http://www.hereford.org)

The EPDs printed in the catalog are from the Feb. 16, 2026 American Hereford Association report.

Updated GE-EPDs will be available sale day and online at [flyingsherefords.com](http://flyingsherefords.com)

# The Fall Long Yearling Bulls

This set of fall 2024-born bulls we feel is truly one of the best sets of bulls we have raised to date.

As a group, they have an actual birth weight average of 77 lbs.,

an average 205-day weight of 763 lbs. and an average 365-day weight of 1341 lbs.

When it comes to carcass, they combined to average 11.8 square inches on REA and 2.74% for IMF.

Current scrotal circumference, reported in centimeters, will be available on the sale supplement.

*Top Herd Bull Prospect!*

A true herd sire in every sense! This powerful 0043H son combines phenotype, performance, and proven pasture fertility. He's not just a sale feature, he's been the bull trusted to cover up service on the very heifers selling today. That alone tells you everything about his disposition, soundness and breeding reliability.

4046M is stout made, deep sided and built with the kind of muscle shape and structural integrity that lasts. He should stamp his progeny with extra body, bone and eye appeal.

- 64 lb. actual BW
- 810 lb. actual WW and a 1400 lb. actual YW
- Ratioed 114 on REA and 109 on IMF
- His service was used on our fall heifers.
- He has been trich tested and will sell with all health papers.

510C has been a favorite of mine since she was born. She is a prolific, proven, powerhouse donor female with pigment, a big body, deep side, great udder and tremendous style. She has outstanding EPDs and is backed by one of the top cow families in the breed. Six sons have averaged over \$10,000, with the top selling bull at \$30,000.

These embryos represent an opportunity to invest in progeny from a proven female that you would want to build a program around. Her combination of maternal strengths, fleshing ability, phenotype, fertility, longevity and udder quality will leave a lasting mark on your herd.

1 embryo package sells

7142T was an outstanding donor cow with tons of power and volume. She combines a great udder with a powerful EPD profile and a great phenotype. She is the dam of the HH Advance 9144W bull that topped Holden's 2010 sale and the dam of Holden's HH Advance 1069Y ET herd sire. She has several outstanding daughters in our herd along with the Holden herd that are incredible producers.

Here is one of your last chances to acquire embryos out of this proven powerhouse donor.

### NOTE:

The embryos selling are IVF embryos. Seller guarantees a minimum of one pregnancy per package if implanted by a licensed embryologist.

# The Open Heifers

This is the best set of open heifers we have ever offered! As our national cow herd is at a historic low and calf prices are high, now is the time to start rebuilding. These heifers are from the heart of our program.

The traits you will gain from our heifers include pigment, udder quality, fertility, soundness, great disposition, phenotype, performance and carcass.
