WELCOME...

Dear Friends,

It is with a grateful heart that we invite you to our 2025 Top Cut Bull & Female Sale. Each year we strive to bring the best cattle that we have bred and raised to our customers. We are truly humbled by all of our customers, past and present, who have supported us.

It is hard to part with, but also awesome to be able to offer some of our top genetics in our sale. We feel there are some great opportunities for everyone. As our program continues to grow, we decided to have our largest offering of registered females from the heart of our production program. We are offering registered fall and spring calvers, registered open heifers and of course registered BULLS. Lets not forget the F1 cattle; we know they thrive here in the South. New this year is a group of quarter blood brahman heifers out of F1 cows.

We feel our bulls truly meet everyone's expectations and demands of the industry. They are raised in a manner to perform for many years.

The cattle we are offering represent a lot hard work; we have not cut corners on any aspect of the operation. We select each mating for each female in our program. We study each female's genotype and phenotype and select a bull that will enhance her in every aspect. Our program relies on maternal genetics, as well as the demands of the industry. We have been building this program for years and plan to continue with great success. All the registered cattle have been genomic tested, ensuring their EPDs are accurate, and all are up-to-date on deworming and vaccinations.

Cattle will be available for viewing on Friday afternoon, and a social will begin at 6pm.

Please feel free to reach out to the MG/4M crew if we can assist in any way. Our gates are always open if you would like visit us before the sale.

Along for the ride,

Ron, Shaunna, Rylie & Stran Melancon

- **Heifer safe.**
- Double red eyed, conservatively marked, from a calf this one has been nothing but impressive. Study him from any angle and he is holes free. No matter the direction of your operation this guy is surely fit to do it all.
- 471 ranks in the top 4% for WW, 6% for YW, 4% for SCF, 13% for MG, 9% for UDDR, 4% for TEAT and 5% for BMI & BII. He ratioed a 108 for WW and 106 for YW. His dam, 8238, originating from /Walker Hereford, has been consistent and productive. She records a progeny ratio of 4 @ 105.3 for WW and her daughters have a milking ratio at 106.3. This cow is nothing short of super productive.
- We are retaining half interest, half possession of Lot 471. Details to be completed with buyer.

- **Homozygous polled.**
- Whether on paper or phenotypically, here is one that could build or advance your operation. Don't miss this BW to YW spread, which is what you want when selling pounds of beef. 476 is not only backed by the popular Merit 21134, but his dam is one of our favorite Dealer 666D daughters that sells as Lot 109. We are selling our best!
- 476 ranks in the top 6% for WW, 11% for YW, 7% for SCF, 10% for MG, 4% for TEAT, 1% for REA and CHB, 3% for MARB, BMI & BII. He ratioed a 102 for WW & YW. His dam records a milking ratio of a 113 for her daughters. A paternal brother sold to Barnes Herefords, GA for \$9,500 from our 2024 Fall Sale.

- Here is an awfully impressive Exceed Z426 son that is out of a first calf heifer. He was another one that we have liked since birth and has developed with that rugged, herd bull image. We are breeding the Exceed genetics to our proven 111E daughters and that is serving us well.
- 4112 ranks in the top 9% for UDDR and 4% for TEAT. He also ratioed a 108 for WW and a 105 for YW.

- As many of you know, we hold 2079 near and dear to our hearts. This bull has out performed and surpassed every expectation we could have ever asked in his progeny. In our 2025 Spring sale, 7 sons averaged \$6,000 and 10 yearling heifers averaged \$4,000. When you study these half-brothers, they really remind us of 2079 when he was that age. They are durably built with impeccable structure, plenty of muscle and mass yet they have an awesome look from the side. It doesn't stop there, study them on paper and you will understand why 2079 is becoming the main focus in our operation. He records a progeny ratio of 55 calves @ 102 for WW and 47 @ 103 for YW. Production is our focus.

- When we purchased 221, we were really excited about the daughters and creating a new maternal line that would cross well with our horned genetic, but little did we know how impressive the sons were going to be. This is the first set of half-brothers that we have offered. We sold 3 yearling paternal sisters in our 2025 Spring sale, and they were highly sought after. They are all moderate in size, dark red and packed with power. 221 goes back to the famous Hutton 4030 that has sired over 400 progeny, and owned by Barber Ranch in Texas and his dam being in the herds of Iron Lake Ranch, Langley Farms and DKM Parker Farms.

022 Sire Group

This set is big boned, rugged and stout made, yet still moderate in size. As we have watched these bulls develop, we feel like this sire group is very consistent, phenotypically. If you purchase half-brothers, it benefits your calf crop with consistency. 022 goes back to the well-known R Leader sire, and his well known, impactful dam being Mercedes. This group of bulls have an outstanding BMI and BII index as a whole. Most being in the top 15% for both, they would be a great choice for commercial cattlemen for keeping replacements.

- Heifer safe.
- Red eyed.
- This growthy, red eyed bull is very maternal as well. Udder and teat development on his daughter's should be impeccable. A maternal sibling sold in our 2024 Fall sale for \$6500.
- 4100 ranks in the top 10% for CE, 10% for DMI, 20% for SCF, 13% for MILK, 2% for UDDER, 4% for TEAT and 25% for BMI. His dam records a progeny ratio of 9 @ 100.7 for WW and 3 @ 102 for YW. 4100's dam has over 25 registered progeny, showing her influence on the breed.

- Heifer safe.
- Here is a good opportunity to get in on the last of the 114S genetics. High performing bull that would cross great on a set of Black or Brahman cattle capitalizing on heterosis, just take a look at those indexes.
- 486 ranks in the top 10% for SCF, 11% for BMI, 15% for BIIS and 18% for CHB. His dam has 7 daughters with a milking ratio of 105.

13J Sire Group

Here are 3 Endure grandsons, that follow his trend of being high performing, growthy and still has the rugged herd bull image. 13J goes back to one of our top donors, 1090. These half-brothers should sire calves that will grow from birth to yearling, while adding a ton of carcass value as well.

- Heifer safe.
- Again, the only of his kind...but take a look at him and he is awfully impressive. Growthy, big boned and stout are a few of his highlightable attributes. His grandam was in our herd for over 10 years, equipping him with longevity to last many breeding seasons. His paternal grandsire is the popular BWCC Monument 10D7 who has left his mark in the Brangus and Ultrablack herds.
- He ranks in the top 25% for BW, 25% for SC, 20% for IMF, 35% for STAY, 25% for HP.

- 562's dam is one of our top producing 294 daughters. Double red eyed, sleek and elegant, yet doesn't disappoint when it comes to true power and being a genuine cow. We currently have 2 maternal siblings in production. She ranks in the top 16% for WW, 4% for YW, 21% for SC, 8% for SCF, 3% for BMI & BII and 1% for CHB. Her dam records a progeny ratio of 4 @ 103 for YW and her daughters have a milking ratio of 115. The great ones just keep coming. Paternal sibling to Lot 137.
- Sells open.

- Our 88483 daughters have become some of our favorites. Durable and complete, made for the long haul. She ranks in the top 20 for SC, 15% for SCF, 22% for MILK, 4% for TEAT, 19% for BMI and 24% for BII. Her dam records a progeny ratio of 5 @ 107 for WW and 3 @ 101.7 for YW, and a milking ratio of 109.2 on daughters.
- Notice the 114S cow in this pedigree.
- Sells open.

- Another 235 daughter, who is making his mark in our herd. We used 235 for a breeding season before selling him to Big Ditch Cattle Co. Conservatively marked with a nice style to her. Will have a perfect udder and teats, ranking in the top 9% for UDDER and 4% for TEAT.
- Sells open.

MG/4M COMMERCIAL FEMALES

All commercial heifers are 21-23 months old.

They will start calving January 1 through April 1, 2026, with the bulk of them in the first 60 days.

These heifers were vaccinated with ReproStar L5HB and dewormed with Cydectin injectable on 8/11/25. All F1 females are tagged with white ear tags, all quarter bloods are tagged with orange ear tags.

B

46 F1 Brahman/Angus Females

F1 COMMERCIAL BRED HEIFERS

- 46 F1 Brahman/Angus females, calving to low-birth-weight Hereford and Angus bulls.
- White tags 200-243, 260 & 261

C

15 F1 Brahman/Red Angus Females

F1 COMMERCIAL BRED HEIFERS

- 15 Brahman/Red Angus females, calving to low-birth-weight Angus bulls.
- White tags 266-276 & 332-336

MG/4M COMMERCIAL FEMALES

All commercial heifers are 21-23 months old.

D

11 F1 Brahman/Hereford Females

F1 COMMERCIAL BRED HEIFERS

- 11 F1 Brahman/Hereford females, calving to low-birth-weight Angus bulls.
- White tags 284-294

E

6 Super Baldies

1/4 BLOOD COMMERCIAL BRED HEIFERS

- 6 Super Baldies. Half Brahman out of English black Baldy cows, calving to low birth Angus bulls.
- Orange tags 299-304

F

10 1/4 Blood Blacks

1/4 BLOOD COMMERCIAL BRED HEIFERS

- 10 quarter blood blacks, out of F1 Brangus cows and Angus bulls, calving to low-birth-weight Angus bulls.
- Orange tags 305-314

G

13 1/4 Blood Red & White Face

1/4 BLOOD COMMERCIAL BRED HEIFERS

- 13 1/4 blood red and white face, out of F1 Braford or F1 Red cows and Hereford bulls.
- Orange tags 315-326

Take advantage of hybrid vigor by capitalizing on Hereford genetics.

The Maternal Advantage program generates females with added longevity, more docility, increased fertility and more profit per year.

Can be utilized by producers using Hereford bulls on British-based cows or Brahman-based cows in their breeding program.

Producers utilizing the program will have access to a sire EPD summary, added market exposure, replacement selection tools, genetic improvement tools and access to AHA resources, marketing and staff.

Qualifications

- Producers must verify that eligible females are sired by registered Hereford bulls with transferred ownership.
- Participating bull batteries must rank in the top 50% of the breed for Baldy Maternal Index (BMI\$) if used on British-based cows or the top 50% of the breed for Brahman Influence Index (BII\$) if used on Brahman-based cows.

MG/4M TOP CUT BULL & FEMALE SALE

UNDERSTANDING EPDs

The American Hereford Association (AHA) currently produces expected progeny differences (EPDs) for 17 traits and calculates three profit indexes. AHA's genetic evaluation makes use of a Marker Effects Model that allows the calculation of EPDs by incorporating the pedigree, phenotypic and genomic profile of an animal. Animals that have a genomic profile will be denoted with a GE-EPD logo.

The current suite of Hereford EPDs and profit indexes includes:

Calving Ease — Direct (CE)

CE EPD is based on calving ease scores and birth weights and is measured on a percentage. CE EPD indicates the influence of the sire on calving ease in females calving at 2 years of age. For example, if sire A has a CE EPD of 6 and sire B has a CE EPD of -2, then you would expect on average, if comparably mated, sire A's calves would have an 8 percent more likely chance of unassisted calving when compared to sire B's calves.

Birth Weight (BW)

BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average, if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD.

Weaning Weight (WW)

WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of 60 and sire B has a WW EPD of 40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lb. heavier at weaning when compared to sire B's calves.

Yearling Weight (YW)

YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

Dry Matter Intake (DMI)

The DMI EPD predicts the daily consumption of pounds of feed. For example, if sire A has a DMI EPD of 1.1 and sire B has a DMI EPD of 0.1, you would expect sire B's progeny, if comparably mated, to consume on average 1 pound of feed less per day.

Scrotal Circumference (SC)

Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality, and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty. Yearling sons of a sire with a 0.7 SC EPD should have yearling scrotal circumference measurements that average 0.7 centimeters (cm) larger than progeny by a bull with an EPD of 0.0 cm.

Sustained Cow Fertility

The AHA's new SCF EPD is a prediction of a cow's ability to continue to calve from three years of age through 12 years of age, given she calved as a two-year-old. The EPD is expressed as a deviation in the proportion of the 10 possible calvings to 12 years old expressed as a probability. For example, the daughters of a bull with a 30 EPD would have the genetic potential to have one more calf by age 12 than the daughters from a bull with a 20 EPD. In other words, the daughters from the 30 EPD bull would have a 10% greater probability of having one more calf than the bull with a 20 EPD. This is equivalent to saying that the daughters are 10% more likely to remain in the herd to age 12.

Maternal Milk (MM)

The MM EPD of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

Maternal Milk & Growth (M&G)

The M&G EPD reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of the daughter's progeny weaning weight. A bull with a 29 lb. M&G EPD should sire daughters with progeny weaning weights averaging 19 lb. heavier than progeny of a bull's daughters with a M&G EPD of 10 lb. (29 minus 10 = 19 lb.). It is equal to one-half the sire's weaning weight EPD, plus all of his MM EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. It is sometimes referred to as "total maternal" or "combined maternal."

Maternal Calving Ease (MCE)

MCE EPD predicts how easily a sire's daughters will calve at two years of age and is measured on a percentage. For example, if sire A has a MCE EPD of 7 and sire B has a CE EPD of -3, then you would expect on average if comparably mated, sire A's daughters would calve with a 10% more likely chance of being unassisted when compared to sire B's daughters.

Mature Cow Weight (MCW)

The MCW EPD was designed to help breeders select sires that will either increase or decrease mature size of cows in the herd. The trait was developed after years of cow weight data collection and the EPD relates directly to the maintenance requirements of a cow herd. For example, if sire A has a MCW EPD of 100 and sire B has an EPD of 85, then you would expect the females of sire A, if comparably mated, to be 15 lb. heavier at mature size.

Udder suspension (UDDR)

UDDR EPDs are reported on a 9 (very tight) to 1 (very pendulous) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment.

For example, if sire A has a UDDR EPD of 0.4, and sire B has a UDDR EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score better udder suspension in daughters of sire A, compared to sire B.

Teat size (TEAT)

TEAT EPDs are reported on a 9 (very small) to 1 (very large, balloon shaped) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment.

For example, if sire A has a teat size EPD of 0.4, and sire B has a teat size EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score smaller teat size in daughters of sire A, compared to sire B.

Carcass Weight (CW)

CW EPD is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight. For example, if sire A has a CW EPD of 84 and sire B has a CW EPD 64, then you would expect the progeny of sire A, if harvested at the same age constant endpoint, to have a 20-lb. advantage in terms of hot carcass weight.

Rib Fat (FAT)

The FAT EPD reflects differences in adjusted 365-day, 12th-rib fat thickness based on carcass measurements of harvested cattle. Sires with low, or negative FAT EPDs, are expected to produce leaner progeny than sires with higher EPDs. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Ribeye Area (REA)

REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Marbling (MARB)

MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, [IMF]) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Baldy Maternal Index (BMIS)

The BMI\$ is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

Brahman Influence Index (BIIS)

The BIIS is a maternally focused index that is based on a production system that uses Brahman x Hereford cross cows. Progeny of these cows are directed towards a commodity beef market since Certified Hereford Beef® does not accept Brahman influenced cattle. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability in finishing non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep harvested progeny successful for a variety of commodity based programs. This index targets producers that use Hereford bulls on Brahman influenced cows.

Certified Hereford Beef Index (CHBS) The Certified Hereford Beef Index (CHBS) is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows where all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight and Marbling to ensure profit on the rail. As well there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. In addition, there is a positive weighting for Rib-eye Area and a negative weighting for Back Fat to maintain desirable Yield Grades. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.

This image shows a full page of white paper with horizontal grey ruling lines. In the bottom right corner, there is a black logo consisting of the text "MG/4M" followed by a stylized outline of a cheetah's head facing right.
