ONLINE BIDDING

Hannah Copenhaver 660-909-7472

LiveAuctions.TV

TERMS: Cash, check or all major credit cards unless prior arrangements have been made with the individual owner(s) or sale manager.

REGISTRATION CERTIFICATES: Certificates of registration are all in order. It is the buyer's responsibility to give the clerks the correct name and address for transferring the purchased animals as the certificates will be mailed from the American Hereford Association to the purchaser.

EPDS: The EPDs given are current as of October 8, 2024.

LIABILITY: Each animal will be at the buyer's risk as soon as they are sold. The Missouri Hereford Association accepts no liability nor does the Missouri State Fairgrounds. Everyone attends at their own risk.

GUARANTEE: The cattle sell with the AHA breeder's guarantee.

HEALTH: Proper health papers will be available on each lot during settlement.

AI CERTIFICATES: There will be no AI certificates furnished on animals bred to bulls not owned by the individual consignors.

INSURANCE: Insurance will be available on your purchases at the sale. Contact the sale clerk for more information.

TRAVEL: If you are flying, the Kansas City International Airport is 1 hour and 45 minutes from the sale site and is served by most major airlines. If you are driving, the Missouri State Fairgrounds address is: 2503 W. 16th St., Sedalia, MO 65301

ACCOMMODATIONS:

Best Western State Fair Inn 660-826-6100
Comfort Inn 660-829-5050
Holiday Inn Express 660-826-4000
Hotel Bothwell 660-826-5588
Hampton Inn 660-951-1163
Super 8 660-827-5890

Missouri State Fairgrounds • Sedalia, MO • Noon
Saturday, Nov. 2, 2024 • Annual Meeting 5 p.m. • Banquet 6 p.m.

MISSOURI Opportunity Sale

On November 3rd the Missouri Hereford Association will host the 22nd consecutive Opportunity Sale in Sedalia, Missouri at the Missouri State Fairgrounds.

On behalf of the Association and the Board of Directors, I would like to be the first to invite you to be with us at the 2024 Opportunity Sale. This is a fun filled Hereford weekend with the Association's annual meeting and awards banquet on Saturday night November 2nd starting at 5 p.m. If you are unable to attend the sale November 3rd at noon, make plans to be with us online with Live AuctionsTV. We have 24 consignors, bringing you 49 lots to consider. This sale is designed by the name Opportunity for both buyers and sellers. It helps the Hereford breeders' market and purchase the top of the Hereford Breed from across Missouri and beyond. This sale is a marketing service provided by the MHA to its members from Missouri and other states! These cattle have all been selected for the sale by our AHA Director of Field Management and Seedstock Marketing, Joe Rickabaugh, for the past 22 years! The board of directors would like to thank Joe for all his efforts over the years.

Hereford cattle continue to be at the top in the beef cattle business for their versatility. You will find our consignors have put together a powerful set of cattle again this year. The show heifer age females have the look the judges like in the show ring, you would drive many miles to find any better. Joe has told me we have some outstanding cows and bred females. We have spring pair splits this year that will draw your attention. The fall yearling heifers have breed leading genetics and EPDs. The herd bull prospect demands your attention! Our new commercial female division of the sale brings new opportunities to consignors and buyers with a few sets of awesome females. I think we will all agree this is a powerful offering for you to consider no matter what you are looking for!

I would like to thank our consignors for their efforts to breed and get such an outstanding set of Hereford genetics here to Sedalia. If you need any help making selections, please contact me or any of the sales staff. That's what we are here for.

I would also like to thank the sales staff and the board of directors for all their hard work that has truly made this great association event. There is fun and excitement for all in Sedalia, Missouri, the first full weekend in November each year and I think you would want to be a part of it again this year. Plan to attend the annual awards banquet at 6 p.m. Saturday November 2nd. There will be several trailers at this event from around the state, and Arkansas to help you with your trucking needs. All cattle must leave the sale site following the sale.

Finally, I would like to thank everyone for this opportunity for me to serve you as the Missouri Hereford Secretary and represent the breeders of Missouri with this great sale. It has been an honor to be the sale manager and work with each consignor and the sale staff to organize this great opportunity. I hope to see everyone there November 3rd.

Once again, the sale headquarters will be the Best Western State Fair Inn. Ask for the Hereford Associations block room rate. Sedalia is a hard town to get a room in so call now 660-826-6100.

Other accommodations are listed in this catalog.

Hope to see you in Sedalia!!

Andi Howard. MHA Secretary
905 County Road 348

- Here's a nice, well made daughter out of our herd sire, Justice, and own son of the Abrahadabra's donor cow, Jewel 113, and out of a M236 daughter, T113, who was 13 years old when she had 031H. T113 was a good producer of both herd bulls and productive females. 031H is moderate framed and is well pigmented. Her 2023 daughter sold in the 2024 CMPHBA Spring Sale.
- Pasture exposed to RHF 8Y HG X395 006H ET, a full brother to Rose Garden 4067B, from 11/20/23 to 2/15/24. Should calve by sale day.

• Victor is a dark cherry red polled bull, brings stoutness, depth, and good breeding to the sale. His dam converts grass to pounds and has an excellent udder. Reserve champion in his division at the Missouri State Fair. This bull is great for a commercial herd, making an impact especially on maternal cows and replacement heifers.

• Great genetic package heifer. BMIs index in the top 10%, CHB\$ index in the top 11%, driven by great EPDs for calving ease, maternal calving ease, sustained cow fertility, udder, teat, and carcass traits. Her dam, JSD 1302 1503 Merida 1823, is a broody smooth made cow that has been great for our operation. Prim has a thick level top with plenty of depth of body. She sells open, ready to breed.

• PICK OF THREE BULLS. JSD 2002 6964 Leader L238 is a goggled eyed bull that has a great EPD profile. All indexes are in the top 30%. A curve bender, with a CED in the top 15% and both WW and YW in the top 30%. Plus, an appropriate MCW below breed average! L238 is a maternal sibling to Jensen's 2023 show steer that was 5th Overall at the NE FFA Expo and Champion Hereford Carcass Steer at the 2023 Missouri State Fair. This bull is sired by the ever popular R Leader 6964. Use this bull to bend the growth curve.

• 3125L is a deep bodied, heavily muscled bull that is loaded with pigment. His dam has a near perfect udder and is goggle eyed as well. He is being offered as he was. Too young for our spring bull sale. Selling full possession and full semen interest.

• Roseann is a very well-balanced heifer. She has some great numbers to back her up. This heifer is one not to pass up on sale day!
 • Pasture exposed to FTFMUY Bueno 358L from 5/10/24 to 8/9/24. She was ultrasound safe with a heifer calf and is due. To calve early-mid February.

- This classy heifer has all the bells and whistles. She is deep bodied, well-balanced, and will be a great addition to anyone's operation. She is from a very strong cow family in our herd. Pasture exposed to FTF MU Y Bueno 358L from 5/10/24 to 8/9/24. She is due to calves towards the end of February with a bull calf.

- This heifer came to us in dam as one of our selections out of the 2022 LJR/MSU sale. L02's sire is definitely making his mark on the breed, and the bottom side of her pedigree is a representative of generations of breed standouts! This girl is a special opportunity to build a well rounded herd with longevity and production in mind.
- Bred AI to Statesman on 2/2/24, then pasture exposed to MMM 180D Liberator L05 from 5/25/24 to 8/6/24. Ultrasound safe to AI with a heifer calf by Statesman.

- This heifer is one that puts all the pieces together that makes a great package! She has the flesh and the look everyone desires. She brings a lot of performance potential with her EPD profile putting her near the top of the breed in maternal, growth, and carcass performance.
- Bred AI to Statesman on 2/2/24, then pasture exposed to MMM 180D Liberator L05 from 5/25/24 to 8/6/24. Confirmed AI bred by ultrasound to Statesman. Carrying a bull calf that could be the opportunity you were looking for to take your herd to the next level of performance.

- 403M caught Joe's eye when we drove into the pasture. She is correct, upheaved, and holds a great side view. Halter broke and very gentle. She has a percent of generations of TAR breeding on her maternal side, all with picture perfect udders that raised heavy calves. You will be pleased when she calves for you.

- This 4365 heifer instantly catches your eye as an attractive show heifer prospect, but where I read her true value to be is a brood cow. Like many Tycoon progeny, she has the look and show ring appeal to run the circuit, yet her sound structure, rib shape, and moderate frame will allow her to remain functional. Her maternal brother sold in the 2021 Hoffman Ranch Bull Sale for \$23,000.

- Beautiful 3-year-old, goggle eyed cow that's just getting started. This one hurts to part with, but we are reducing numbers so nothing was off limits when Joe came to look. Margot is perfect uddered and has done a great job for us. She's a front pasture kind of cow and could easily move into any donor pen.
- Bull calf at side (30), Calved: 8/26/24, Sired by: KJ 7603 Venture; BW 90 lb.
- Sells open.

Lot 47 — Commercial Heifers Three (3) Head

47

THREE (3) COMMERCIAL HEIFERS

HEIFERS Sires: MH SALVATION 7048 ET & WMC 384E F08 EPIC 233H
 Dam: Red Angus

- This group of red baldy females are off the top end of our replacements. They are bred to a Mandate son, 2006. 3006's dam is a huge asset to our program. Huge opportunity here. Service sire registration number is P44511189.
- Due dates: 3182 (2/8/25); 3832 (2/10/25); and 3849 (2/22/25)

Understanding Hereford EPDs

The American Hereford Association (AHA) currently produces expected progeny differences (EPDs) for 17 traits and calculates three profit indexes. AHA's genetic evaluation makes use of a Marker Effects Model that allows the calculation of EPDs by incorporating the pedigree, phenotypic and genomic profile of an animal. Animals that have a genomic profile will be denoted with a GE-EPD logo.

The current suite of Hereford EPDs and profit indexes includes:

Calving Ease — Direct (CE)

CE EPD is based on calving ease scores and birth weights and is measured on a percentage. CE EPD indicates the influence of the sire on calving ease in females calving at 2 years of age. For example, if sire A has a CE EPD of 6 and sire B has a CE EPD of -2, then you would expect on average, if comparably mated, sire A's calves would have an 8 percent more likely chance of unassisted calving when compared to sire B's calves.

Birth Weight (BW)

BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average, if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD.

Weaning Weight (WW)

WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of 60 and sire B has a WW EPD of 40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lb. heavier at weaning when compared to sire B's calves.

Yearling Weight (YW)

YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

Dry Matter Intake (DMI)

The DMI EPD predicts the daily consumption of pounds of feed. For example, if sire A has a DMI EPD of 1.1 and sire B has a DMI EPD of 0.1, you would expect sire B's progeny, if comparably mated, to consume on average 1 pound of feed less per day.

Scrotal Circumference (SC)

Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality, and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty. Yearling sons of a sire with a 0.7 SC EPD should have yearling scrotal circumference measurements that average 0.7 centimeters (cm) larger than progeny by a bull with an EPD of 0.0 cm.

Sustained Cow Fertility

The AHA's new SCF EPD is a prediction of a cow's ability to continue to calve from three years of age through 12 years of age, given she calved as a two-year-old. The EPD is expressed as a deviation in the proportion of the 10 possible calvings to 12 years old expressed as a probability. For example, the daughters of a bull with a 30 EPD would have the genetic potential to have one more calf by age 12 than the daughters from a bull with a 20 EPD. In other words, the daughters from the 30 EPD bull would have a 10% greater probability of having one more calf than the bull with a 20 EPD. This is equivalent to saying that the daughters are 10% more likely to remain in the herd to age 12.

Maternal Milk (MM)

The MM EPD of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

Maternal Milk & Growth (M&G)

The M&G EPD reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of the daughter's progeny weaning weight. A bull with a 29 lb. M&G EPD should sire daughters with progeny weaning weights averaging 19 lb. heavier than progeny of a bull's daughters with a M&G EPD of 10 lb. (29 minus 10 = 19 lb.). It is equal to one-half the sire's weaning weight EPD, plus all of his MM EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. It is sometimes referred to as "total maternal" or "combined maternal."

Maternal Calving Ease (MCE)

MCE EPD predicts how easily a sire's daughters will calve at two years of age and is measured on a percentage. For example, if sire A has a MCE EPD of 7 and sire B has a CE EPD of -3, then you would expect on average if comparably mated, sire A's daughters would calve with a 10% more likely chance of being unassisted when compared to sire B's daughters.

Mature Cow Weight (MCW)

The MCW EPD was designed to help breeders select sires that will either increase or decrease mature size of cows in the herd. The trait was developed after years of cow weight data collection and the EPD relates directly to the maintenance requirements of a cow herd. For example, if sire A has a MCW EPD of 100 and sire B has an EPD of 85, then you would expect the females of sire A, if comparably mated, to be 15 lb. heavier at mature size.

Udder suspension (UDDR)

UDDR EPDs are reported on a 9 (very tight) to 1 (very pendulous) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment.

For example, if sire A has a UDDR EPD of 0.4, and sire B has a UDDR EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score better udder suspension in daughters of sire A, compared to sire B.

Teat size (TEAT)

TEAT EPDs are reported on a 9 (very small) to 1 (very large, balloon shaped) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment.

For example, if sire A has a teat size EPD of 0.4, and sire B has a teat size EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score smaller teat size in daughters of sire A, compared to sire B.

Carcass Weight (CW)

CW EPD is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight. For example, if sire A has a CW EPD of 84 and sire B has a CW EPD 64, then you would expect the progeny of sire A, if harvested at the same age constant endpoint, to have a 20-lb. advantage in terms of hot carcass weight.

Rib Fat (FAT)

The FAT EPD reflects differences in adjusted 365-day, 12th-rib fat thickness based on carcass measurements of harvested cattle. Sires with low, or negative FAT EPDs, are expected to produce leaner progeny than sires with higher EPDs. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Ribeye Area (REA)

REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Marbling (MARB)

MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, [IMF]) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Baldy Maternal Index (BMIS)

The BMIS is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

Brahman Influence Index (BIIS)

The BIIS is a maternally focused index that is based on a production system that uses Brahman x Hereford cross cows. Progeny of these cows are directed towards a commodity beef market since Certified Hereford Beef® does not accept Brahman influenced cattle. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability in finishing non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep harvested progeny successful for a variety of commodity based programs. This index targets producers that use Hereford bulls on Brahman influenced cows.

Certified Hereford Beef Index (CHBS) The Certified Hereford Beef Index (CHBS) is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows where all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight and Marbling to ensure profit on the rail. As well there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. In addition, there is a positive weighting for Rib-eye Area and a negative weighting for Back Fat to maintain desirable Yield Grades. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.
