bulls & breds
Annual sale

new date
saturday, february 15, 2025 @ 1 pm

Welcome

Welcome to our 15th Annual Sale!

As you may have noticed, this year we moved our sale back 21 days to give us a little breathing room between Denver and the start of calving. So now, on sale day (the third Saturday in February) we will be in the middle of calving with no place to put new pairs. That plan is clear as mud and sounds easier, right? I guess no sense in doing anything easy!

These Herefords do offer us one thing that comes easy though, and that is Heterosis. Heterosis is the power you get when you crossbreed your cows to a Hereford bull. That Hereford influence delivers free pounds, docility, feed efficiency and an overwhelming acceptance in the marketplace as feeders and replacements. With the high price of feeder cattle, now is the time to take advantage. It is just like the free lunch on sale day, so come hungry!

Our focus continues to be on breeding sound cattle with performance, muscle, pigment, eye appeal and acceptable birth weights. We demand fertility and superior production from our cows with an emphasis on udder quality. We think the bulls and females offered here represent the product we are striving to produce for our customers.

Most of the cattle selling have GE-EPDs. Genomic Enhanced EPDs provide the latest technology available to genetically test an animal and obtain the highest accuracy possible in their EPDs. We do this to give buyers a higher level of confidence that their bull or heifer will get the job done. EPDs are current at the time of catalog printing, and will be updated on all the cattle selling the week prior to the sale.

You will also notice many of the bulls are designated with \$CHB logos.  signifies that the bull is in the top 50% of the breed, and the  signifies animals in the top 25% of the breed for producing feeder cattle that will excel in the economically relevant traits of gain, feed efficiency and carcass merit when mated to Angus cows.

We understand that finding a place to house a new herd bull in February can be a challenge, so we are happy to keep any bull you purchase on feed until April 1, 2025 - free of charge. All the bulls will be semen tested and are fully guaranteed.

If you can't make the sale feel free to call one of us or the sales staff for assistance, or you can bid on LiveAuctions.TV the day of the sale.

Thank you to all our customers for your past purchases, friendship and the confidence you have shown in our program. We look forward to working with you in the future. (Lunch starts at Noon!)

The Delaney & Atkins Families

directions to the sale barn -

From Lake Benton, MN - Take Hwy 75 north 4 miles, turn west onto County Hwy 13 for 5 miles. Turn north on County Road 101 for 1.5 miles. Delaney Herefords Sale Barn is on the west side of the road.

From Ivanhoe, MN - Take Hwy 75 south 5 miles, turn west onto County Hwy 15 for 5 miles. Turn south on County Road 101 for 2.5 miles. Delaney Herefords Sale Barn is on the west side of the road.

Just 20 minutes from Brookings, SD - Take Hwy 14 east toward Lake Benton 20 miles. Turn north on County Hwy 1 for 4 miles. Turn east onto County Hwy 13 for 2 miles. Turn north onto County Road 101 for 1.5 miles. Delaney Herefords Sale Barn is on the west side of the road.

Sale Info

terms - Terms of the sale are cash or check payable during or after the sale, before cattle will be released. Cattle will not be transferred until paid in full. Each animal will be at the buyer's risk immediately after the animal is sold. Delaney Herefords and/or Atkins Herefords will be retaining a 1/4 semen interest for in-herd use only on all bulls selling unless otherwise noted in footnotes or announced sale day.

guarantee - All bulls will be semen tested and examined to be sound and guaranteed breeders. If an animal fails to breed and is reported to seller by August 1, 2025, it may be returned to seller if in good condition and in compliance with Minnesota health regulations. Once the bull has been returned to the seller and confirmed that he is not a breeder, a replacement bull or credit on next year's sale will be offered.

health - All cattle will be sold in compliance with the health laws of the State of Minnesota. Health papers will be provided. All bulls have been tested and are free from any known genetic defects.

winter - **For your convenience, you may winter purchased bulls at Delaney Herefords FREE OF CHARGE through April 1, 2025.** After April 1, 2025 a yardage charge of \$3.50 per day will apply. We ask females be picked up as soon as possible following the sale. Heifers left will incur a \$400 calving charge, plus \$4/day yardage fee.

insurance - Animals left at Delaney Herefords will be at the buyer's risk immediately following the sale and we strongly recommend purchasing insurance. Contact Art Handel at (605) 391-8233 for your insurance needs.

transfers - Registration certificates will be transferred to the buyer at the seller's expense. Each buyer must be sure to give the clerk the proper name and address for making transfers.

delivery - Delaney Herefords/Atkins Herefords will pay half the cost of trucking on bull purchases that total more than \$5,000.

epds - EPDs listed in the catalog are current at time of catalog printing. Updated EPDs will be available sale day. All cattle have been tested for known genetic defects. Under each animal's EPDs, we have listed the animal's percentile ranking in the breed for that trait.

NOTE - All persons who attend the sale do so at their own risk. Owners assume no liability, legal or otherwise, for accidents or loss of property that may occur.

Bulls

We've got you covered!

Leave your new herd bull(s) here until April 1, 2025.

- FREE OF CHARGE -

Bulls will be kept on a TMR, high roughage ration to develop naturally to be ready for the breeding season.

All bulls will be semen tested and examined by our vet for breeding soundness by April 1st.

We'll have bulls in tip-top shape, ready for your cows come Spring!

Horned or Polled?

USING A HOMOZYGOUS POLLED BULL
100% of calves will be polled, regardless of cow horn genotype.

It is safe to assume that long term straight bred Angus cows are homozygous polled. With that assumption, it leads to more opportunities to use heterozygous polled and even horned bulls.

Heterozygous or Homozygous?

USING A HETEROZYGOUS POLLED BULL
Mated to horned cows: 50% of calves will be horned 50% of calves are polled.

Mated to heterozygous polled cows: 25% of calves will be horned. 75% of calves will be polled.

Mated to homozygous polled cows: 100% of calves will be polled.

USING A HORNED BULL

Mated to horned cows: 100% of calves will be horned

Mated to heterozygous polled cows: 50% of calves will be horned, 50% of calves will be polled.

Mated to Homozygous polled cows: 100% of calves will be polled.

WHOA.

Homozygous Polled. Denver Pen Bull.

Sale Feature!

His picture is no joke. This bull has all the style and look you could ask for. Athletic, big footed and correct in the angle of his front shoulder and knee and ideal hip and hind leg. He's dark red out of a perfect uddered 3 year old. She raised one of our high seller's last year as a first calf heifer that's working for Double Seven Ranch in Oklahoma and came back around with this stud on her second calf.

65M will be used heavily here, homozygous polled, dark red Benton sons that are calving ease with this amount of look and presence don't come around often. Not to mention he offers great figures with a big scrotal and a 181 CHB. 65M is the real deal.

Terms to be announced sale day.

Sale Highlight!

23M is one of our favorite bulls in the sale. He offers an outcross pedigree, huge goggle eyes, elite phenotype and excellent EPDs. This moderate framed bull is ultra deep and soggy and is ideal on his feet and legs. He will add tremendous value to most operations. Top 5% or better in 11 traits including top 1% in scrotal circumference. Jerry's favorite replacement heifer is a full sister to both Lots 12 and 13.

FULL SISTER TO LOT 12 | 84M

84M is heading to Denver as a member of our Denver Pen of Heifers.

Sale Highlight. Herd bull!

Here's a true beef bull, this guy is deep, stout and full of red meat. His combination of low birth and genuine performance doesn't come around often. He's loaded with pigment, homozygous polled and offers an outstanding EPD profile. His pedigree combines our immortal 45C and the popular 7098 cow. Top 1% of the breed in 5 traits including SCF, UDDR, TEAT and a BMI of 627!

Retaining 1/4 revenue sharing semen interest.

Denver Pen Bull. Homozygous Polled.

This bull starts a string a full brothers that represent the most consistent flush of cattle we have had since the Standout, Benton and Prominent flush.

Dam, 71G, posts 3 @ 95 for BW and 3 @ 114 for WW. Three maternal brothers have averaged \$13,000 in this sale including Lots 1 and 2 on last year's sale. A full sister was one of our high sellers on our fall online sale and the other is a member of our Pen of 3 Heifers in Denver.

7M is an ultra complete, balanced type of bull that is sound footed and big bodied. He's dark red, fully pigmented and offers a progressive set of figures with 7 traits in the top 10% of the breed.

Retaining 1/4 revenue sharing semen interest.

85M leads off a string of 3 full brothers that goes back to one of our favorite cow families. We have written this in a Lot of footnotes of his maternal brothers and sisters but it needs to be stated. This bulls Dam, Grand Dam and Great Grand Dam are all still in production. Fertility and longevity drive profit in the cattle business. Take the risk out of your next herd bull purchase and tie into one of these full brothers. 85M is the highest performing bull in the flush. 6 traits in the top 10% of the breed.

Homozygous Polled. Denver Pen Bull.

This guy drew a lot of attention as a standout calf in the pasture all summer. One of the first sons of On Demand, his dam is the great producing 814F who is a daughter of 19Z. 814F raised a heifer calf in 2023 that was one of the top sellers in our fall 2023 sale going to GKB in Texas. A full sister to lot 40 topped our fall 2024 sale selling to Colby Decker and Wiese and Sons.

This calf has outstanding balance and pattern to go along with a stout, square hip and great muscle down through his quarter. Here is a herd bull in the making.

We are retaining a 1/4 revenue sharing semen interest, selling full possession.

DAM OF LOTS 40 & 47 | AH LADY LUCK 814F

We really like the On Demand sired cattle and this mating with the 73F donor has been a homerun. Lot 41 is a heavy pigmented calving ease bull that is backed by a great cow family. A full sister will be featured in our Denver Pen of heifers.

115M

This full sister to Lot 41 is headed to Denver with the great crew pictured to the right.

FALL BULL.

As we move to fall calving at Atkins Herefords, we have our first fall bull to offer and we think he is a good one! One of the stoutest, heaviest muscled sons of Final Print you will find anywhere. Good footed, large testicles and pigmented with tons of performance. These two fall bulls were developed on grass this summer and come to you ready to breed. His mother is a big bodied cow with an excellent udder that passes along a lot of performance. His grandmother raised one of the top selling heifer calves in our 2023 fall sale and has several sons in this sale. Study this herd bull prospect closely. We are retaining a ¼ revenue sharing semen interest, selling full possession.

FALL BULL.

Another fall son of Final Print, this one is a natural calf out of the 14C donor and should be a sleep all night, heifer safe bull. With just a 68 pound birth weight he still weaned off at over 700 pounds. His 205 day ratio seems low at 94 however we only had these two fall bulls so his only contemporary was lot 45. His mother has a lot of body and volume and still has a great udder at 9 years of age. Excellent set of EPD's with udder and Teat in the top 1% of the breed, you will want to keep his daughters. GE EPD's will be available prior to the sale

Another son of our new and exciting herd bull Kiosk K184. We Al'd quite a few cows back to K184 and if they turn out like the two in this sale we will be very pleased. 133M does nothing but get better everyday. He offers elite growth with even better carcass figures including a 0.31 Marb and \$187 CHB!

97M is a wide based, stout made bull that's deep bodied and sound.

Breds

There is no greater investment than a bred female.

Many of these heifers are carrying the service of *Final Print* who is one of the hottest bulls in the breed.

Others are bred to our new, exciting calving ease sires *Garfield* or *Gold Print*.

All females have been poured with Dectomax and will have received two shots of Scour-Boss before sale day. They were also given their pre-breeding booster shot of BoviShield Gold FP 5VL5 this fall.

We do ask heifers be picked up as soon as possible following the sale. Heifers left will incur a \$400 calving charge, plus \$4/day yardage fee. If other accommodations need to be made, please contact us we will be happy to work with you.

Gorgeous Final Print full sisters sell as Lots 61 and 62. Two full brothers were highlights in last year's sale. These two freckle faced females are loaded with quality and are both Homozygous Polled. Unfortunately they both came back as DBC but if you're willing to breed around that they have the phenotypic quality, pedigree and EPDs to be future donors.

Pasture Exposed to 4B Garfield 338 from 4-25 to 8-1. Vet called safe for a February 1st calving date.

Homozygous Polled. Sale Feature!

Two full brothers averaged nearly \$15,000 and her dam, 17G, commanded \$10,000 in last years sale. Huge bodied broody type of a female that is sure to sire herd bulls. She will have a Final Print heifer calf at side by sale day. This one has donor potential. 8 traits in the top 10% of the breed.

AI'ed to RST Final Print 0016 on 4-21-24. Vet called safe to AI date carrying a heifer calf due January 29th. Pasture Exposed to RST 0016 GoldPrint 3031 from 4-25 to 7-1.

AN EXPLANATION OF EPDS

Calving Ease – Direct (CE) - CE EPD is based on calving ease scores and birth weights and is measured on a percentage. CE EPD indicates the influence of the sire on calving ease in females calving at 2 years of age. For example, if sire A has a CE EPD of 6 and sire B has a CE EPD of -2, then you would expect on average if comparably mated, sire A's calves would be born with an 8% more likely chance of being unassisted when compared to sire B's calves.

Birth Weight (BW) - BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD.

Weaning Weight (WW) - WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of 60 and sire B has a WW EPD of 40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lb. heavier at weaning when compared to sire B's calves.

Yearling Weight (YW) - YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

Maternal Milk (MM) - The milking ability of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

Maternal Calving Ease (MCE) - MCE EPD predicts how easily a sire's daughters will calve at 2 years of age and is measured on a percentage. For example, if sire A has a MCE EPD of 7 and sire B has a CE EPD of -3, then you would expect on average if comparably mated, sire A's daughters would calve with a 10% more likely chance of being unassisted when compared to sire B's daughters.

Mature Cow Weight (MCW) - The MCW EPD was designed to help breeders select sires that will either increase or decrease mature size of cows in the herd. The trait was developed after years of cow weight data collection and the EPD relates directly to the maintenance requirements of a cow herd. An example of how the MCW EPD allows breeders to compare sires: If sire A has a MCW EPD of 100 and sire B has an EPD of 85, then you would expect the females of sire A, if mated to similar cows, to be 15 lb. heavier at mature size.

Udder Suspension (US) - Scores range from 9 (very tight) to 1 (very pendulous) and represent assessments of udder support. Weak udder suspension results in pendulous udders that make it difficult for a calf to nurse. Weak suspension in the udder indicates a lack of support in the ligament that ties the udder to the cow's body wall. Over time, weakness in this ligament will allow the udder to hang down too far from the body and may subject the udder to serious problems and increased potential for injury. UDDR EPDs are reported on the scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment. For example, if sire A has a UDDR EPD of 0.4, and sire B has a UDDR EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score better udder suspension in daughters of sire A, compared to sire B.

Teat size (TS) - Scores range from 9 (very small) to 1 (very large, balloon shaped) and are subjective assessments of the teat length and circumference. Oversized teats are difficult for newborn calves to nurse, and the calf may not receive adequate colostrum. This could lead to a higher incidence of scours or decreased immunity levels in the newborn calf. TEAT EPDs are reported on the scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment. For example, if sire A has a teat size EPD of 0.4, and sire B has a teat size EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score smaller teat size in daughters of sire A, compared to sire B.

Scrotal Circumference (SC) - Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality, and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty. Yearling sons of a sire with a .7 SC EPD should have yearling scrotal circumference measurements that average 0.7 centimeters (cm) larger than progeny by a bull with an EPD of 0.0 cm. In the Hereford genetic analysis, a multiple-trait model was used for scrotal circumference. Weaning weight was used as a predictor variable to increase the prediction accuracy of SC EPDs. Therefore, an animal with a weaning weight EPD should also have a SC EPD.

Sustained Cow Fertility (SCF) - The AHA's new Sustained Cow Fertility EPD (SCF) is a prediction of a cow's ability to continue to calve from three years of age through twelve years of age, given she calved as a two-year-old. The EPD is expressed as a deviation in the proportion of the ten-possible calving's to twelve years old expressed as a probability. For example, the daughters of a bull with a 30 EPD would have the genetic potential to have one more calf by age twelve than the daughters from a bull with a 20 EPD. In other words, the daughters from the 30 EPD bull would have a 10% greater probability of having one more calf than the bull with a 20 EPD. This is equivalent to saying that the daughters are 10% more likely to remain in the herd to age 12.

Dry Matter Intake (DMI) - The Dry Matter Intake EPD predicts the daily consumption of pounds of feed. For example, if sire A has a DMI EPD of 1.1 and sire B has a DMI EPD of 0.1, you would expect sire B's progeny, if comparably mated, to consume on average 1 pound of feed less per day.

Carcass Weight (CW) - Carcass weight is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight. For example, if sire A has a CW EPD of 84 and sire B has a CW EPD 64, then you would expect the progeny of sire A, if harvested at the same age constant endpoint, to have a 20-lb. advantage in terms of hot carcass weight.

Rib Fat (FAT) - The FAT EPD reflects differences in adjusted 365-day, 12th-rib fat thickness based on carcass measurements of harvested cattle. Sires with low, or negative FAT EPDs are expected to produce leaner progeny than sires with higher EPDs. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Ribeye Area (REA) - REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-musclered and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Marbling (MARB) - MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, [IMF]) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Baldy Maternal Index (BMIS) - The Baldy Maternal Index is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

Certified Hereford Beef Index (CHBS) - The Certified Hereford Beef Index is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows and all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight to ensure profit on the rail. As well there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. Keep in mind, this production system takes advantage of complimentary breeding with the commercial Angus cow. Although Marbling is weighted positively in this index, a positive weighting for Rib-eye Area and a negative weighting for Back Fat are a greater priority in this index to allow for optimum end-product merit. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.
